Greening of the World of Work: O*NET® Project's Book of References

Abstract
[Excerpt] The National Center for O*NET Development, as part of its efforts to keep up with the changing world of work, investigated the impact of green economy activities and technologies on occupational requirements and the development of New and Emerging (N&E) occupations. Results of the research led to the identification of green economic sectors, green increased demand occupations, green enhanced skills occupations, and green new and emerging (N&E) occupations. These occupations are now reflected in the O*NET-SOC system. References used in this research are presented in this book.

Keywords
work, green economy, environment, recycling, workplace

Greening of the World of Work: O*NET Project's Book of References

The National Center for O*NET Development, as part of its efforts to keep up with the changing world of work, investigated the impact of green economy activities and technologies on occupational requirements and the development of New and Emerging (N&E) occupations. Results of the research led to the identification of green economic sectors, green increased demand occupations, green enhanced skills occupations, and green new and emerging (N&E) occupations. These occupations are now reflected in the O*NET-SOC system. References used in this research are presented in this book.

For the National Center for O*NET Development's research on the green economy, read Greening of the World of Work: Implications for O*NET-SOC and New and Emerging Occupations.

We define the ***green economy*** as economic activity related to reducing the use of fossil fuels, decreasing pollution and greenhouse gas emissions, increasing the efficiency of energy usage, recycling materials, and developing and adopting renewable sources of energy.

We have researched numerous reports, books, associations, websites, and webinars to gather information about the impact of the green economy on the world of work. Major work activities of the green economy cover a broad spectrum. To efficiently and effectively determine the potential occupational implications of green technology in our report on the green economy, workplace activities were categorized under different green economy sectors. These 12 sectors represent those areas typically discussed in the extant literature. For ease of presentation, this book of references is organized by the 12 sectors, in addition to one "general green" category for references related to the green economy as a whole.

The following listing of references have been compiled through our initial research report on the green economy and a number of ongoing green activities, such as data collection on occupational and worker requirements for green occupations, updating task lists for green occupations by identifying new tasks resulting from the impact of green economy activities and technologies, updating green lay titles, identifying new green occupations, and tracking green economic sectors to identify new green occupations.

Book of References Organization

The *Greening of the World of Work: O*NET Project's Book of References* includes references used in developing the report *Greening of the World of Work: Implications for O*NET-SOC and New and Emerging Occupations*. This book of references is organized by the 12 green sectors identified in our *Greening of the World of Work: Implications for O*NET-SOC and New and Emerging Occupations* report, in addition to one "general green" category for references related to the green economy as a whole.

Within each section, a description of the sector is given, followed by a table listing all of the green references we have researched within that sector. The tables are organized by 4 columns: Title, Source, Reference Type, and Web Address. The "Title" column provides the title of the reference (e.g., report title, book title). The "Source" column provides information on who wrote the reference (e.g., report author, book author, organization). The "Reference Type" column provides information as to what type of reference is listed (e.g., report, book, webinar, source article). Finally, the "Web Address" column provides a link to where the reference can be found on the Internet. An asterisk (*) next to a reference indicates the reference can be found in multiple sectors.

Following the reference table within each section, we provide a supplemental reference table listing industry associations, trade publications/journals, university/community college programs, training providers, government groups, business sites, and job search sites we consulted to research additional information for each green sector. These supplemental tables are set up like the reference tables; however, there is no "Title" column related to a title of a book or report.

Lastly, immediately following both types of tables within each sector, we provide summary statistics related to the number and types of references we used in our green economy research.

Recently Added References

The following tables contain additional references that have been added since our last quarter update. The references are also highlighted within their respective sections throughout the book.
