September 2009

This report is being distributed by the Rehabilitation Research and Training Center on Employment Policy for Persons with Disabilities at Cornell University.

This center is funded to Cornell University by the U.S. Department of Education, National Institute on Disability and Rehabilitation Research (Grant No. H133B040013). The contents of this paper do not necessarily represent the policy of the Department of Education or any other federal agency, and you should not assume endorsement by the Federal Government (Edgar, 75.620 (b)). The views in this policy brief are not necessarily endorsed by Cornell University or the National Institute on Disability and Rehabilitation Research (NIDRR).

The Co-Principal Investigators are:

Susanne M. Bruyère— Director, Employment and Disability Institute, ILR School, Cornell University

Richard V. Burkhauser— Sarah Gibson Blanding Professor, Department of Policy Analysis and Management, College of Human Ecology, Cornell University

David C. Stapleton— Director, Center for Studying Disability Policy, Mathematica Policy Research

2009 Progress Report on the Economic Well-Being of Working-Age People with Disabilities

Introduction

This progress report on the prevalence rate, employment, poverty, and household income of working-age people with disabilities (ages 21-64) uses data from the 2009 and earlier Current Population Surveys – Annual Social and Economic Supplement (CPS-ASEC, a.k.a. Annual Demographic Survey, Income Supplement, and March CPS). The CPS is the only dataset that provides continuously-defined yearly information on the working-age population with disabilities since 1981.

Data Source

The CPS is a monthly survey of the non-institutionalized population of the United States. Information is collected on labor force characteristics (e.g., employment, earnings, and hours of work). In March of each year, the CPS basic monthly survey is supplemented with the CPS-ASEC. This supplement focuses on sources of income, government program participation, previous employment, insurance, and a variety of demographic characteristics. The CPS and the CPS-ASEC are used extensively by government agencies, researchers, policy makers, journalists, and the general public to evaluate government programs, economic well-being and behavior of individuals, families, and households.

The Census Bureau conducts the CPS on behalf of the Bureau of Labor Statistics. The CPS surveys the resident population of the United States. Citizens living abroad or people living in long-term care facilities are not surveyed. The CPS began in the early 1940s, but the work limitation variable was not introduced until 1981. In 1994, major revisions were made to the employment questions on the Basic Monthly Survey. Changes made in the CPS-ASEC were less substantial, and mainly reflected the shift to computer-assisted interviews. Approximately 150,000 individuals participate in the surveys annually, although this number has increased in recent years. For more information on the CPS-ASEC, see Burkhauser and Houtenville (2006) at <http://digitalcommons.ilr.cornell.edu/edicollect/1233/>, or the BLS/Census Bureau website <http://www.bls.census.gov/cps/cpsmain.htm>.

Definition of Disability¹

The CPS-ASEC asks the work limitation question: "[d]oes anyone in this household have a health problem or disability which prevents them from working or which limits the kind or amount of work they can do? [If so,] who is that? Anyone else?" Similar work limitation questions appear in the American Community Survey (ACS), National Health Interview Survey (NHIS), and the Survey of Income and Program Participation (SIPP). The CPS-ASEC work limitation question has been used extensively in the economics literature to capture the working-age population with disabilities and to compare its employment and economic well-being with the working-age population without disabilities. Yet its use, especially outside the economics literature, is controversial. Some researchers and policy advocates dismiss results based on the CPS as fundamentally flawed, arguing that the set of individuals with work limitations captured in these data represent neither the actual population with disabilities nor its employment trends. (See especially Hale, 2001.) Burkhauser, Daly, Houtenville, and Nargis (2002) show that while the *levels* of employment found in the CPS data are significantly lower than those found in datasets with better measures of the working-age population with disabilities, the employment *trends* are not significantly different. For a fuller discussion of the relative strengths and weaknesses of CPS data for policy research related to the working-age population with disabilities, see Burkhauser and Houtenville (2006) and Houtenville, Stapleton, Weathers and Burkhauser (2009).

Prevalence Rate

• In March 2009, the disability prevalence rate for the working-age population was 8.4 percent, up from 7.9 percent in 2008.

• After rising from a low of 7.3 percent in 1989 to a peak of about 8.4 percent in 1994, prevalence rates were relatively stable through 1997 before falling through 2001. Since then, rates have fluctuated between a range of 7.7 and 8.4 percent.

Note: The values in this chart are available in Table 1 below.

Table 1: Prevalence Rate, Standard Error and Sample Size, by Disability Status and Year, 1981-2009

Year	Prevalence Rate	Standard Error	Sample Size
1981	7.9	0.11	98,196
1982	7.9	0.12	88,593
1983	7.6	0.11	89,277

Note: The population with disabilities is identified using the work limitation question: "[d]oes anyone in this household have a health problem or disability which prevents them from working or which limits the kind or amount of work they can do? [If so,] who is that? Anyone else?" Sample size reflects those ages 21-64 in the reference (survey) year.

Employment Rate

- In March 2009, the employment rate of working-age people with disabilities was 16.8 percent, down from 17.7 percent in 2008, and well below the peak of 28.8 percent in 1989.

- In March 2009, the employment rate of working-age people without disabilities was 76.5 percent, down from 79.7 percent in 2008 and below its peak of 81.7 percent in 2000.

- In March 2009, working-age people with disabilities were only 22 percent as likely to be employed as a working-age person without disabilities.

- Between March 2008 and March 2009, the relative employment rate of working-age people with disabilities remained the same at 0.22, well below its peak of 0.37 in 1989.

Note: The values in this chart are available in Table 2 below.

Table 2: Employment Rate, Standard Error and Sample Size, by Disability Status and Year, March 1981-2009

Year	People with Disabilities			People without Disabilities

Note: The population with disabilities is identified using the work limitation question: "[d]oes anyone in this household have a health problem or disability which prevents them from working or which limits the kind or amount of work they can do? [If so,] who is that? Anyone else?" Sample size reflects those ages 21-64 in the reference (survey) year.

Full-Time/Full-Year Employment

- In 2008, the full-time/full-year employment rate of working-age people with disabilities was 7.2 percent, down from 2007 when it was 8.0 percent and well below its peak of 13.3 percent in 1985.

- In 2008, the full-time/full-year employment rate of working-age people without disabilities was 60.8 percent, down from 63.4 percent in 2007 and below its peak of 64.8 percent in 2000.

- In 2008, working-age people with disabilities were 12 percent as likely to be employed full-time/full-year as a working-age person without disabilities.

- The relative full-time/full-year employment rate of working-age people with disabilities decreased from 0.13 in 2007 to 0.12 in 2008.

Note: The values in this chart are available in Table 3 below.

Table 3: Full-Time/Full-Year Employment Rate, Standard Error and Sample Size, by Disability Status and Year, 1980-2008

Year	People with Disabilities			People without Disabilities

Note: The population with disabilities is identified using the work limitation question: "[d]oes anyone in this household have a health problem or disability which prevents them from working or which limits the kind or amount of work they can do? [If so,] who is that? Anyone else?" Sample size reflects those ages 21-64 in the reference (not survey) year.

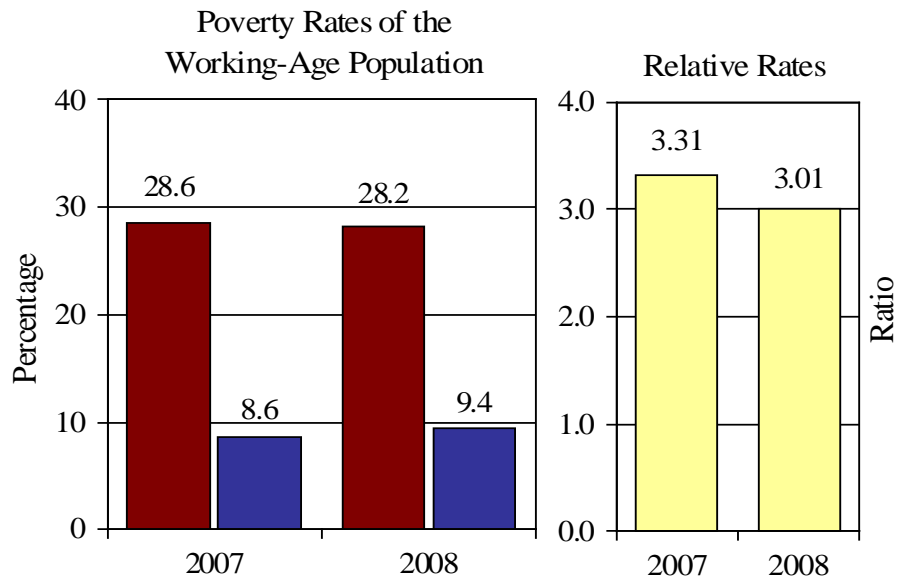

Poverty Rate

- In 2008, the poverty rate of working-age people with disabilities decreased very slightly to 28.2 percent, well above its low of 24.8 percent in 1980.

- In 2008, the poverty rate of working-age people without disabilities was 9.4 percent, up slightly from 8.6 percent in 2007 and well above its 7.4 percent low in 2000.

- In 2008, working-age people with disabilities were 3.01 times more likely to be in poverty when compared to working-age people without disabilities.

- Between 2006 and 2007, the relative poverty rate of working-age people with disabilities decreased from 3.31 to 3.01. The relative rate is well below its high of 3.68 in 2000.

Note: The values in this chart are available in Table 4 below.

Table 4: Poverty Rate, Standard Error and Sample Size, by Disability Status and Year, 1980-2008

Year	People with Disabilities			People without Disabilities

Note: The population with disabilities is identified using the work limitation question: "[d]oes anyone in this household have a health problem or disability which prevents them from working or which limits the kind or amount of work they can do? [If so,] who is that? Anyone else?" Sample size reflects those ages 21-64 in the reference (not survey) year.

Median Household Income (Constant 2008 Dollars)

- In 2008, the median household income of working-age people with disabilities was \$32,161, a slight increase from \$31,783 in 2007, and below its peak of \$34,455 in 1999.

- In 2008, the median household income of working-age people without disabilities was \$60,946, down slightly from \$62,315 in 2007 and below its peak of \$64,369 in 1999.

- In 2008, the median household income of working-age people with disabilities was 53 percent of the median household income of working-age people without disabilities.

- The relative median household income of working-age people with disabilities increased to 0.53 in 2008, from its value of 0.51 in 2007, but still well below its peak of 0.62 in 1982.

Median Household Income of the Working-Age Population, 1980-2008 (Constant 2008 Dollars)

Note: The values in this chart are available in Table 5 below.

Source: 1981-2009 Annual Social and Economic Supplement to the Current Population Survey.

Note: The population with disabilities is identified using the work limitation question: "[d]oes anyone in this household have a health problem or disability which prevents them from working or which limits the kind or amount of work they can do? [If so,] who is that? Anyone else?" Sample size reflects the number of households with members ages 21-64 in the reference (not survey) year.

Glossary of Terms

Disability.¹ A work limitation is determined in the March CPS by the following question: "[d]oes anyone in this household have a health problem or disability which prevents them from working or which limits the kind or amount of work they can do? [If so,] who is that? Anyone else?"

Employment Rate. The employment rate is estimated in the month of March, which is when the CPS Annual Social and Economic Supplement and its work limitation question are asked. Also known as the employment-to-population ratio, the employment rate is the percentage of the population that is employed. Persons who are employed are persons 16 years and over in the civilian non-institutional population who, during the full week prior to their survey, (a) did any work at all (at least 1 hour) as paid employees, worked in their own business, profession, or on their own farm, or worked 15 hours or more as unpaid workers in an enterprise operated by a member of the family, and (b) all those who were not working but who had jobs or businesses from which they were temporarily absent because of vacation, illness, bad weather, childcare problems, maternity or paternity leave, labor-management dispute, job training, or other family or personal reasons, whether or not they were paid for the time off or were seeking other jobs. Each employed person is counted only once, even if he or she holds more than one job. Excluded are persons whose only activity consisted of work around their own house (painting, repairing, or own home housework) or volunteer work for religious, charitable, and other organizations. The total population (the numerator of the employment rate) consists of persons who are employed, persons who are unemployed, and persons not in the labor force. Note: the employment rate is not 100 minus the unemployment rate.

Full-Time/Full-Year Employment. At least 50 weeks during the previous calendar year and at least 35 hours per week. Determined by condition that weeks worked is greater than or equal to 50 and usual hours per week is greater than or equal to 35 hours.

Household Income. Household income is the sum of personal incomes of all household members. Income values are based on a large set of questions. The CPS Annual Social and Economic Supplement in March asks questions on the amount of income received in the preceding calendar year from each of the following sources: earnings (from the labor market, farming and self-employment), unemployment compensation, workers' compensation, Social Security, Supplemental Security Income, public assistance, veterans' payments, survivor benefits, disability benefits, pension or retirement income, interest, dividends, rents, royalties, estates and trusts, educational assistance, alimony, child support, financial assistance from outside of the household, and other income. Personal income is the sum of income from these components. No corrections were made to account for topcoding of household income, as topcoding has slight effect on median calculations. However, income is adjusted for inflation. The dollar values in years prior to 2008 have been adjusted upwards to their 2008 equivalent. To do so, we use the Consumer Price Index Research Series (CPI-U-RS) from the Bureau of Labor Statistics (for more information, see <http://www.bls.gov/cpi/cpirsdc.htm>).

A dollar value in a given year is divided by the CPI-U-RS of that year and then multiplied by the CPI-U-RS of 2008. Median household income is calculated with the household as the unit of analysis, using household weights without adjusting for household size. Adjusting household income by dividing by size presents an alternative measure of economic well-being by accounting for the fact that some households have more members than others.

Poverty Rate. The poverty rate is the percentage of persons living in families in which the family (pre-tax) income is below the poverty line. The poverty line is determined by the federal government as specified in OMB Statistical Policy Directive 14. It approximates the dollar value necessary to purchase essential goods and services for people or families. It is important to note that the poverty line does not provide a complete description of what people and families need to live, rather it is an estimate based upon a set of assumptions. For example, the poverty measure assumes that the needs of the population with disabilities are the same as those without disabilities. The poverty line depends on the size and composition of the family with regard to the number of children, adults and persons age 65 or over. For example, the poverty line (or threshold) in 2008 was \$11,201 for a one-person family and \$21,834 for a four-person family with two children (under age 18), and \$21,910 for a four-person family with three children. The thresholds for 2008 may be found at <http://www.census.gov/hhes/www/poverty/threshld/thresh08.html>. More detail about the calculation of the poverty line may be found at www.census.gov/population/www/cps/cpsdef.html, or www.aspe.hhs.gov/poverty/poverty.shtml.

¹ In this report, we focus on the CPS-ASEC work limitation question in order to monitor changes over time. However, beginning in June 2008, the Basic Monthly CPS includes a new set of six questions to identify persons with various types of disabilities. The disability questions appear in the Basic Monthly CPS in the following format:

This month we want to learn about people who have physical, mental, or emotional conditions that cause serious difficulty with their daily activities. Please answer for household members who are 16 years old or over.

- Is anyone deaf or does anyone have serious difficulty hearing?
- Is anyone blind or does anyone have serious difficulty seeing even when wearing glasses?
- Because of a physical, mental, or emotional condition, does anyone have serious difficulty concentrating, remembering, or making decisions?
- Does anyone have serious difficulty walking or climbing stairs?
- Does anyone have difficulty dressing or bathing?
- Because of a physical, mental, or emotional condition, does anyone have difficulty doing errands alone such as visiting a doctor's office or shopping?

These questions were originally developed by the U.S. Census Bureau and are also used on the American Community Survey. They can be used in conjunction with the CPS-ASEC economic indicators for the first time in March 2009, when the CPS-ASEC and Basic Monthly surveys are jointly fielded. The new disability questions are asked during the incoming rotations of the CPS, and responses that are collected earlier are retained to establish disability status in later rotations (Burkhauser and Houtenville (2006) describes the CPS rotation scheme). For more information about the new CPS disability questions please visit http://www.bls.gov/cps/cpsdisability_faqs.htm.
