Introduction

2008 Annual Disability Status Report	2
2008 ACS Disability Questions	3
New Features and Notes	5

Summary

the United States: Summary	6
Prevalence by State: Ages 21 to 64	8
Employment by State: Ages 21 to 64	9

Demographics

Prevalence: All Ages	10
Prevalence: Ages 4 and under	12
Prevalence: Ages 5 to 15	14
Prevalence: Ages 16 to 20	16
Prevalence: Ages 21 to 64 (Working-Age)	18
Prevalence: Ages 65 to 74	20
Prevalence: Ages 75 and Older	22
Prevalence: Gender and Age	24
Prevalence: Hispanic / Latino Origin and Age	27
Prevalence: Race	30

Outcomes

Employment	32
Not Working but Actively Looking for Work	34
Full-Time / Full-Year Employment	36
Annual Earnings (Full-Time / Full-Year workers)	38
Annual Household Income	40
Poverty	42
Supplemental Security Income (SSI)	44
Education: High School Diploma / Equivalent	46
Education: Some College / Associate's Degree	48
Education: Bachelor's Degree or More	50
Veterans Service-Connected Disability	52
Health Insurance Coverage	54
Type of Health Insurance Coverage	56

Glossary	59

About the StatsRRTC	64
----------------------------	----

The 2008 Annual Disability Status Report

The Annual Disability Status Reports provide policy makers, disability advocates, reporters, and the public with a summary of the most recent demographic and economic statistics on the non-institutionalized population with disabilities. They contain information on the population size and disability prevalence for various demographic subpopulations, as well as statistics related to employment, earnings, household income, veterans service-connected disability and health insurance. Comparisons are made to people without disabilities and across disability types. Disability Status Reports and other statistics are available for each state, the District of Columbia, and Puerto Rico at www.disabilitystatistics.org.

The Status Reports primarily look at the working-age population because the employment gap between people with and without disabilities is a major focus of government programs and advocacy efforts. Employment is also a key factor in the social integration and economic self-sufficiency of working-age people with disabilities.

The estimates in the 2008 Disability Status Report are based on American Community Survey (ACS) data - a US Census Bureau survey designed to replace the Decennial Census long form. See the ACS User Guide on www.disabilitystatistics.org for additional information on the ACS.

In 2008 the US Census Bureau made a number of significant changes to the ACS. These changes included an entirely new set of disability questions as described on the following page. Changes made to other 2008 ACS questions, including those regarding employment status and the number of weeks worked in the past 12 months (used to calculate full-time/full year employment status), also may have an impact on the results in this report. Because of these changes, comparisons should not be made with previous status reports or estimates. For a summary of all changes to the ACS 2008 survey see the following Census Bureau document: <http://www.census.gov/acs/www/Downloads/SummaryResultsACS2006ContentTest.pdf>.

The estimates in these reports are based on responses from a sample of the population and may differ from actual population values because of sampling variability and other factors. As a result, differences between the estimates for two or more groups may not be statistically significant.

2008 ACS Disability Questions

A number of major changes were made to the ACS disability questions in 2008. The US Census Bureau made these changes to better identify specific portions of the population of persons with disabilities, and to more clearly define disability as a functional limitation that may increase a person's risk of participation limitation. These changes mean that the population of persons with disabilities identified in 2008 is different from that identified in previous years, and the results should not be compared.

Below are the disability questions used in the 2008 ACS. Note that the Census Bureau refers to each of the individual types as "difficulty" while in this report the term "disability" is used.

Hearing Disability *(asked of all ages):*

16a. Is this person deaf or does he/she have serious difficulty hearing?

Visual Disability *(asked of all ages):*

16b. Is this person blind or does he/she have serious difficulty seeing even when wearing glasses?

Cognitive Disability *(asked of persons ages 5 or older):*

17a. Because of a physical, mental, or emotional condition, does this person have serious difficulty concentrating, remembering, or making decisions?

Ambulatory Disability *(asked of persons ages 5 or older):*

17b. Does this person have serious difficulty walking or climbing stairs?

Self-Care Disability *(asked of persons ages 5 or older):* 17c. Does this person have difficulty dressing or bathing?

Independent Living Disability *(asked of persons ages 15 or older):*

18. Because of a physical, mental, or emotional condition, does this person have difficulty doing errands alone such as visiting a doctor's office or shopping?

The major changes from the previous ACS disability questions are:

Duration of limitation was removed and the term "serious" is used to focus on longer term/more severe impairments.

Employment Disability question is no longer asked.

Vision and Hearing Disabilities (was Sensory Disability) are now two separate questions and include children under the age of 5.

Cognitive Disability (was Mental Disability): dropped "learning" as an activity, added the activity "making decisions."

Ambulatory Disability (was Physical disability) is now limited to mobility related activities; "reaching, lifting, or carrying" activities dropped.

Self-Care Disability (was Self-Care disability): no longer includes phrase "Because of a physical, mental, or emotional condition." The new question is limited to dressing and bathing activities, and the "getting around inside the home" activity is dropped.

Independent Living Disability (was Go-Outside-Home disability): dropped both the time restriction "lasting 6 months or more" and the phrase "Outside the home."

New Features and Notes

New Features

Additional Topics: Two new topics of special interest to disability were added to the revised 2008 ACS and have been included in the 2008 Disability Status Report: health insurance coverage and veterans service-connected disability rating. As the two new sensory disability questions (visual and hearing disabilities) are asked of children ages 4 and under, estimates for this age group are included in this report.

Further Notes

Puerto Rico: A Puerto Rico Disability Status Report, based on the parallel 2008 Puerto Rico Community Survey, is available again this year. However, please note that the Puerto Rico sample is not included in any U.S. population estimates included in these reports.

Group Quarters: In 2006, the ACS began surveying the group quarters population. We include the non-institutionalized group quarters population, but due to small state level sample sizes exclude the institutionalized group quarters population (see glossary) in the Disability Status Reports.

Margin of Error (MOE): As in last year's report we provide the 90% MOE to better illustrate sampling variability. See the glossary entry for more information on this topic.

Glossary: As in previous years, we provide a comprehensive glossary at the back of this report defining the terms used in the Disability Status Report. (see glossary.)

Note: According to the Census Bureau, estimates based on the ACS Public Use Microdata Sample (PUMS) file may differ slightly from the ACS summary tables produced by the Census Bureau because they are subject to additional sampling error and further data processing operations. Please see <http://www.ilr.cornell.edu/edi/disabilitystatistics/faq.cfm#Q4> for further information.

United States Summary

These statistics indicate the social and economic status of non-institutionalized people with disabilities in the United States, using data from the 2008 American Community Survey (ACS). Comparisons to the 2007 Disability Status Report should not be made due to changes in the 2008 ACS questions.

Age: In 2008, the prevalence of disability in the US was:

- 12.1 percent for persons of all ages
- 0.7 percent for persons ages 4 and under
- 5.1 percent for persons ages 5 to 15
- 5.6 percent for persons ages 16 to 20
- 10.4 percent for persons ages 21 to 64
- 26.6 percent for persons ages 65 to 74
- 51.5 percent for persons ages 75+

Gender: In 2008, 12.4 percent of females of all ages and 11.7 percent of males of all ages in the US reported a disability.

Hispanic/Latino: In 2008, the prevalence of disability among persons of all ages of Hispanic or Latino origin in the US was 8.4 percent.

Race: In the US in 2008, the prevalence of disability for working-age people (ages 21 to 64) was:

- 10.2 percent among Whites
- 14.3 percent among Black / African Americans
- 4.6 percent among Asians
- 18.8 percent among Native Americans
- 9.8 percent among persons of some other race(s)

Employment: In 2008, the employment rate of working-age people (ages 21 to 64) with disabilities in the US was 39.5 percent.

Looking for Work: In the US in 2008, the percentage actively looking for work among people with disabilities who were not working was 8.7 percent.

Full-Time/Full-Year Employment: In the US in 2008, the percentage of working-age people with disabilities working full-time/ full-year was 25.4 percent.

Annual Earnings: In 2008, the median annual earnings of working-age people with disabilities working full-time/full-year in the US was \$35,600.

Annual Household Income: In the US in 2008, the median annual income of households with working-age people with disabilities was \$39,600.

Poverty: In the US in 2008, the poverty rate of working-age people with disabilities was 25.3 percent.

Supplemental Security Income: In 2008, the percentage of working-age people with disabilities receiving SSI payments in the US was 17.7 percent.

Educational Attainment: In 2008, the percentage of working-age people with disabilities in the US:

- with only a high school diploma or equivalent was 34.0 percent
- with only some college or an associate degree was 29.7 percent
- with a bachelor's degree or more was 12.3 percent.

Veterans Service-Connected Disability: In 2008, the percentage of working-age civilian veterans with a VA determined Service-Connected Disability was 16.9 percent in the US.

Health Insurance Coverage: In 2008 in the US, 81.8 percent of working-age people with disabilities had health insurance.

Prevalence: Ages 21 - 64

This summary lists percentages by state of non-institutionalized working-age (ages 21 to 64) people with disabilities using data from the 2008 American Community Survey (ACS). Comparisons to the 2007 Disability Status Report should not be made due to changes in the 2008 ACS disability questions.

Prevalence

All Ages

Introduction

This section addresses the prevalence of disability among non-institutionalized people of all ages in the United States, using data from the 2008 American Community Survey (ACS). For definitions of terms, see Glossary. Comparisons to the 2007 Disability Status Report should not be made due to changes in the 2008 ACS disability questions.

Quick Statistics

12.1%

Prevalence:
All Ages

- In 2008, the overall percentage (prevalence rate) of people with a disability of all ages in the US was 12.1 percent.
- In other words, in 2008, 36,169,200 of the 299,852,800 individuals of all ages in the US reported one or more disabilities.
- In the US in 2008, among the six types of disabilities identified in the ACS, the highest prevalence rate was for "Ambulatory Disability," 6.9 percent. The lowest prevalence rate was for "Visual Disability," 2.3 percent.

Prevalence of disability among non-institutionalized people of all ages in the United States in 2008*

Chart

Table

Disability Type	%	MOE	Number	MOE	Base Pop.	Sample Size
Any Disability	12.1	0.05	36,169,200	157,070	299,852,800	2,949,415
Visual	2.3	0.02	6,826,400	71,880	299,852,800	2,949,415
Hearing	3.5	0.03	10,393,100	88,160	299,852,800	2,949,415
Ambulatory	6.9	0.04	19,203,700	118,020	278,976,400	2,770,321
Cognitive	4.8	0.04	13,462,900	99,810	278,976,400	2,770,321
Self-Care	2.6	0.03	7,195,600	73,750	278,976,400	2,770,321
Independent Living	5.5	0.04	13,179,300	98,800	238,826,000	2,384,789

* **Note:** Children under the age of five were only asked about Vision and Hearing disabilities. The Independent Living disability question was only asked of persons aged 16 years old and older.

Prevalence

Ages 4 years and under

Introduction

This section focuses on the prevalence of disability among non-institutionalized children ages 4 and under in the United States, using data from the 2008 American Community Survey (ACS). Only the two sensory disability questions were asked of this population. Comparisons to the 2007 Disability Status Report should not be made due to changes in the 2008 ACS disability questions. For definitions of terms, see Glossary.

Quick Statistics

0.7%

Prevalence:
Ages 4 and
under

- In 2008, the overall percentage (prevalence rate) of children with a visual and/or hearing disability ages 0 to 4 in the US was 0.7 percent.
- In other words, in 2008, 156,200 of the 20,876,400 children ages 0 to 4 in the US reported one or more disabilities.
- In the US in 2008, 0.4 percent reported a visual disability
- In the US in 2008, 0.5 percent reported a hearing disability

Self-Care	0.9	3.29	395,600	17,490	44,299,900	427,147

* **Note:** The "Independent Living Disability" question was not asked of children ages 15 years old and younger.

Prevalence

Ages 16 to 20 years

Introduction

This section focuses on the prevalence of disability among non-institutionalized people ages 16 to 20 in the United States, using data from the 2008 American Community Survey (ACS). For definitions of terms, see Glossary. Comparisons to the 2007 Disability Status Report should not be made due to changes in the 2008 ACS disability questions.

Quick Statistics

Prevalence:
Ages 16 to
20 years
5.6%

- In 2008, the overall percentage (prevalence rate) of people with a disability ages 16 to 20 in the US was 5.6 percent.
- In other words, in 2008, 1,233,700 of the 22,107,800 individuals ages 16 to 20 in the US reported one or more disabilities.
- In the US in 2008, among the six types of disabilities identified in the ACS, the highest prevalence rate was for "Cognitive Disability," 3.8 percent. The lowest prevalence rate was for "Hearing Disability," 0.7 percent.

Prevalence

Ages 75 and Older

Introduction

This section focuses on the prevalence of disability among non-institutionalized people ages 75 and older in the United States, using data from the 2008 American Community Survey (ACS). For definitions of terms, see Glossary. Comparisons to the 2007 Disability Status Report should not be made due to changes in the 2008 ACS disability questions,

Quick Statistics

Prevalence:
Ages 75 and
Older

51.5%

- In 2008, the overall percentage (prevalence rate) of people with a disability ages 75 and older in the US was 51.5 percent.
- In other words, in 2008, 8,913,300 of the 17,298,500 individuals ages 75 and older in the US reported one or more disabilities.
- In the US in 2008, among the six types of disabilities identified in the ACS, the highest prevalence rate was for "Ambulatory Disability," 33.9 percent. The lowest prevalence rate was for "Visual Disability," 11.2 percent.

Prevalence

Gender and Age

Introduction

This section examines the prevalence of disability among people by gender and age group in the United States, using data from the 2008 American Community Survey (ACS)*. For definitions of terms, see Glossary.

Comparisons to the 2007 Disability Status Report should not be made due to changes in the 2008 ACS disability questions.

Quick Statistics

Prevalence:
Males All
Ages

11.7%

Prevalence:
Female All
Ages

12.4%

- In the US in 2008, the overall percentage (prevalence rate) of males with a disability of all ages was 11.7 percent.
- In other words, in 2008, 17,182,300 of the 147,192,100 males of all ages in the US reported one or more disabilities.
- In the US in 2008, the overall percentage (prevalence rate) of females with a disability of all ages was 12.4 percent.
- In other words, in 2008, 18,986,900 of the 152,660,700 females of all ages in the US reported one or more disabilities.

Prevalence

Race

Introduction

This section presents the disability prevalence rate among non-institutionalized working-age people (ages 21 to 64) by race category in the US, using data from the 2008 American Community Survey (ACS). For definitions of terms, see Glossary. Comparisons to the 2007 Disability Status Report should not be made due to changes in the 2008 ACS disability questions.

Quick Statistics

In 2008, among working-age people in the US:

- 10.2 percent of persons who were White reported a disability.
- 14.3 percent of persons who were Black/African American reported a disability.
- 18.8 percent of persons who were Native American reported a disability.
- 4.6 percent of persons who were Asian reported a disability.
- 9.8 percent of persons who were some other race(s) reported a disability.

Supplemental Security Income (SSI)

Introduction

This section focuses on the percentage of non-institutionalized working-age people (ages 21 to 64) with disabilities who receive Supplemental Security Income (SSI) payments in the United States, using data from the 2008 American Community Survey (ACS). For definitions of terms, see Glossary. Comparisons to the 2007 Disability Status Report should not be made due to changes in the 2008 ACS disability questions. Please note that these results will differ from official Social Security Administration reports for several reasons. For additional information please email DisabilityStatistics@cornell.edu.

Quick Statistics

SSI
Recipients:
with disability
17.7%

- In 2008, the percentage of working-age people with disabilities receiving Supplemental Security Income payments in the US was 17.7 percent.
- In 2008, the number of working-age people with disabilities receiving Supplemental Security Income payments in the US was 3,237,600.
- Among the six types of disabilities identified in the ACS, the highest percentage that received SSI was people with "Independent Living Disability," 28.9 percent. The lowest percentage that received SSI was people with "Hearing Disability," 10.7 percent.

Percentage of non-institutionalized working-age people (ages 21 to 64) with disabilities who receive Supplemental Security Income (SSI) payments in the United States in 2008

Education

High School Diploma/Equivalent

Introduction

This section explores the percentage of non-institutionalized working-age people (ages 21 to 64) with disabilities with only a high school diploma or equivalent in the United States, using data from the 2008 American Community Survey (ACS). Comparisons to the 2007 Disability Status Report should not be made due to changes in the 2008 ACS disability questions. For definitions of terms, see Glossary.

Quick Statistics

High School
Only: with

Veterans Service-Connected Disability Rating

Introduction

This section presents the percentage of non-institutionalized working-age (ages 21 to 64) civilian veterans reporting a service-connected disability in the United States. The 2008 American Community Survey (ACS) asks if the veteran has a service-connected disability, and if so, what their rating is (0-100%). A "service-connected" disability is one that has been determined by the Department of Veterans Affairs (VA) as being a result of disease or injury incurred or aggravated during military service. Note that a veteran can receive disability compensation for a wide range of conditions, and a veteran with a service-connected disability may not report having one of the six ACS functional or activity limitation disabilities. For definitions of terms, see Glossary.

Quick Statistics

Veterans with a
Service-connected
Disability
16.9%

- In 2008, there were 13,102,700 working-age civilian veterans in the US, of whom 2,217,000 had a VA service-connected disability.
- In 2008, the percentage of working-age civilian veterans in the US with a VA service-connected disability was 16.9 percent.
- In 2008, 396,700 working-age civilian veterans in the US had the most severe service-connected disability rating (70 percent or above).
- In 2008, 17.9 percent of the working-age civilian veterans in the US who had a service connected disability had a service-connected disability rating of 70 percent or above.

Type of Health Insurance Coverage

Introduction

This section examines the type of health insurance coverage for non-institutionalized working-age people (ages 21 to 64) with disabilities in the United States, using data from the 2008 American Community Survey (ACS). Note that people can report more than one type of insurance coverage. For definitions of terms, see Glossary.

Quick Statistics

Coverage
through
Employer/Union:
with Disability

39.0%

Coverage
through
Employer/Union:
without
Disability

66.9%

- In 2008, 39.0 percent of working-age people with disabilities in the US reported health insurance coverage through a current or former employer or union (theirs or another family member).
- In 2008, 66.9 percent of working-age people without disabilities in the US reported health insurance coverage through a current or former employer or union (theirs or another family member).
- In 2008, 9.9 percent of working-age people with disabilities in the US reported purchasing health insurance coverage directly from an insurance company (by themselves or another family member).
- In 2008, 22.5 percent of working-age people with disabilities in the US reported Medicare coverage and 29.0 percent reported Medicaid coverage (or other government-assistance plan for those with low incomes or a disability).

Glossary

Actively Looking for Work

A person is defined as ACTIVELY looking for work if he or she reports looking for work during the last four weeks.

Ambulatory Disability

This disability type is based on the question (*asked of persons ages 5 or older*): Does this person have serious difficulty walking or climbing stairs?

Base Population (Base Pop.)

The estimated number of individuals upon which the calculation is based. (For percentages, this is the denominator).

Cognitive Disability

This disability type is based on the question (*asked of persons ages 5 or older*): Because of a physical, mental, or emotional condition, does this person have serious difficulty concentrating, remembering, or making decisions?

Disability and Disability Types

The ACS definition of disability is based on six questions. A person is coded as having a disability if he or she or a proxy respondent answers affirmatively for one or more of these six categories.

- Hearing Disability (*asked of all ages*): Is this person deaf or does he/she have serious difficulty hearing?
- Visual Disability (*asked of all ages*) : Is this person blind or does he/she have serious difficulty seeing even when wearing glasses?
- Cognitive Disability (*asked of persons ages 5 or older*) : Because of a physical, mental, or emotional condition, does this person have serious difficulty concentrating, remembering, or making decisions?
- Ambulatory Disability (*asked of persons ages 5 or older*): Does this person have serious difficulty walking or climbing stairs?
- Self-care Disability (*asked of persons ages 5 or older*) : Does this person have difficulty dressing or bathing?
- Independent Living Disability (*asked of persons ages 15 or older*): Because of a physical, mental, or emotional condition, does this person have difficulty doing errands alone such as visiting a doctor's office or shopping?

Earnings

Earnings are defined as wages, salary, commissions, bonuses, or tips from all jobs including self-employment income (NET income after business expenses) from own nonfarm businesses or farm businesses, including proprietorships and partnerships.

Education

Our definition is based on the responses to the question: "What is the highest degree or level of school this person has completed? If currently enrolled, mark the previous grade or highest degree received." Our category "high school diploma/equivalent" includes those marking the ACS option "Regular high school diploma — GED or alternative credential." Our category "Some college/Associate's degree" includes those marking the ACS options: some college credit, but less than 1 year of college credit; one or more years of college credit but no degree, or "Associate's degree (for example: AA, AS)." Our category "a Bachelor's or more" includes those marking the ACS options: "Bachelor's degree (for example: BA, BS)"; "Master's degree (for example: MA, MS, MEng, MEd, MSW, MBA)"; "Professional degree (for example: MD, DDS, DVM, LLB, JD)"; or "Doctorate degree (for example: PhD, EdD)." Note in 2008 changes were made to some of the response categories and the layout of this question.

Employment

A person is considered employed if he or she is either

- a. "at work": those who did any work at all during the reference week as a paid employee (worked in his or her own business or profession, worked on his or her own farm, or worked 15 or more hours as an unpaid worker on a family farm or business) or
- b. were "with a job but not at work," : had a job but temporarily did not work at that job during the reference week due to illness, bad weather, industrial dispute, vacation or other personal reasons. The reference week is defined as the week preceding the date the questionnaire was completed.

Full-Time/Full-Year Employment

A person is considered employed full-time/full-year if he or she worked 35 hours or more per week (full-time) and 50 or more weeks per year (full-year). The reference period is defined as the year preceding the date the questionnaire was completed. Note: this does not signify whether a person is eligible for fringe benefits. The question and response categories regarding weeks worked per year was changed in 2008.

Group Quarters (GQ)

A GQ is a place where people live or stay that is normally owned or managed by an entity or organization providing housing and/or services for the residents. These services may include custodial or medical care as well as other types of assistance, and residency is commonly restricted to those receiving these services. People living in group quarters are usually not related to each other. Group quarters include such places as college residence halls, residential treatment centers, skilled nursing facilities, group homes, military barracks, correctional facilities, and workers' dormitories. See the definitions of institutional GQs and non-institutional GQs for more information. In addition, a description of the types of group quarters included in the 2008 ACS is located on the U.S. Census Bureau's Web site at www.census.gov/acs/www/Downloads/2008_ACS_GQ_Definitions.pdf .

Health Insurance Coverage

Is based on the following question: Is this person CURRENTLY covered by any of the following types of health insurance or health coverage plans? Mark "Yes" or "No" for EACH type of coverage in items a – h.

- a. Insurance through a current or former employer or union (of this person or another family member)
- b. Insurance purchased directly from an insurance company (by this person or another family member)
- c. Medicare, for people 65 and older, or people with certain disabilities
- d. Medicaid, Medical Assistance, or any kind of government-assistance plan for those with low incomes or a disability
- e. VA (including those who have ever used or enrolled for VA health care)
- f. TRICARE or other military health care
- g. Indian Health Service
- h. Any other type of health insurance or health coverage plan – Specify (Note: "Other type" were recoded into one of the categories a-g by the Census Bureau)

Hearing Disability

This disability type is based on the question (*asked of all ages*) : Is this person deaf or does he/she have serious difficulty hearing?

Hispanic or Latino Origin

People of Hispanic or Latino origin are those who classify themselves in a specific Hispanic or Latino category in response to the question, "Is this person Spanish/Hispanic/Latino?" Specifically, those of Hispanic or Latino origin are those who are Cuban; Mexican, Mexican American, Chicano; Puerto Rican; or other Spanish/Hispanic/Latino. Origin may be the heritage, nationality group, lineage, or country of birth of the person or the person's parents or ancestors before their arrival in the United States. People who identify their origin as Spanish, Hispanic, or Latino may be of any race.

Household Income

Household Income is defined as the total income of a household including: wages, salary, commissions, bonuses, or tips from all jobs; self-employment income (NET income after business expenses) from own non-farm or farm businesses, including proprietorships and partnerships; interest, dividends, net rental income, royalty income, or income from real estates and trusts; Social Security or Railroad Retirement; Supplemental Security Income; any public assistance or welfare payments from the state or local welfare office; retirement, survivor or disability pensions; and any other regularly received income (e.g., Veterans' payments, unemployment compensation, child support or alimony). Median household income is calculated with the household as the unit of analysis, using household weights without adjusting for household size.

Independent Living Disability

This disability type is based on the question (*asked of persons ages 15 or older*) : Because of a physical, mental, or emotional condition, does this person have difficulty doing errands alone such as visiting a doctors office or shopping?

Institutional Group Quarters (GQs)

Includes facilities for people under formally authorized, supervised care or custody at the time of enumeration. Generally, restricted to the institution, under the care or supervision of trained staff, and classified as "patients" or "inmates." Includes: correctional, nursing, and in-patient hospice facilities, psychiatric hospitals, juvenile group homes and residential treatment centers.

Margin of Error (MOE)

Data, such as data from the American Community Survey, is based on a sample, and therefore statistics derived from this data are subject to sampling variability. The margin of error (MOE) is a measure of the degree of sampling variability. In a random sample, the degree of sampling variation is determined by the underlying variability of the phenomena being estimated (e.g., income) and the size of the sample (i.e., the number of survey participants used to calculate the statistic). The smaller the margin of error, the lower the sampling variability and the more "precise" the estimate. A margin of error is the difference between an estimate and its upper or lower confidence bounds. Confidence bounds are calculated by adding the MOE to the estimate (upper bound) and subtracting the MOE from the estimate (lower bound). All margins of error in this report are based on a 90 percent confidence level. This means that there is a 90% certainty that the actual value lies somewhere between the upper and lower confidence bounds.

Non-Institutional Group Quarters (GQs)

Includes facilities that are not classified as institutional group quarters; such as college/university housing, group homes intended for adults, residential treatment facilities for adults, workers' group living quarters and Job Corps centers and religious group quarters.

Not Working but Actively Looking for Work

A person is defined as not working but actively looking for work if he or she reports not being employed, but has been looking for work during the last four weeks.

Number

This term appears in the tables; it refers to estimated number of people in the category. (for percentages, this is the numerator).

Poverty

The poverty measure is computed based upon the standards defined in Directive 14 from the Office of Management and Budget. These standards use poverty thresholds created in 1982 and index these thresholds to 2008 dollars using poverty factors based upon the Consumer Price Index. They use the family as the income sharing unit and family income is the sum of total income from each family member living in the household. The poverty threshold depends upon the size of the family; the age of the householder; and the number of related children under the age of 18.

Race

Race categories are based on the question, "[w]hat is this person's race? Mark (X) one or

more races to indicate what this person considers himself/herself to be." Responses include the following: White; Black or African-American; American Indian or Alaska Native (print name of enrolled or principal tribe); Asian Indian; Chinese; Filipino; Japanese; Korean; Vietnamese; Other Asian (Print Race); Native Hawaiian; Guamanian or Chamorro; Samoan; Other Pacific Islander (Print Race Below); Some other race (print race below). "Other race" also contains people who report more than one race.

Sample Size

The number of survey participants used to calculate the statistic.

Self-care Disability

This disability type is based on the question (*asked of persons ages 5 or older*): 17c. Does this person have difficulty dressing or bathing?

Supplemental Security Income (SSI)

A person is defined as receiving SSI payments if he or she reports receiving SSI income in the 12 months prior to the survey.

Veteran Service-Connected Disability

A disease or injury determined to have occurred in or to have been aggravated by military service. A disability is evaluated according to the VA Schedule for Rating Disabilities in Title 38, CFR, and Part 4. Extent of disability is expressed as a percentage from 0% (for conditions that exist but are not disabling to a compensable degree) to 100%, in increments of 10%. This information was determined by the following two part question:

a. **Does this person have a VA service-connected disability rating?**

Yes (such as 0%, 10%, 20%, ... , 100%)

No *SKIP* to question 28a

b. **What is this person's service-connected disability rating?"**

Responses included: 0 percent; 10 or 20 percent; 30 or 40 percent; 50 or 60 percent; 70 percent or higher

Visual Disability

This disability type is based on the question: (*asked of all ages*) : Is this person blind or does he/she have serious difficulty seeing even when wearing glasses?

About the StatsRRTC

About the Rehabilitation Research and Training Center on Disability Demographics and Statistics (StatsRRTC)

The Rehabilitation Research and Training Center on Disability Demographics and Statistics (StatsRRTC) bridges the divide between the sources of disability data and the users of disability statistics. We conduct research exploring the reliability of existing data sources and collection methods, and study the potential to improve current and future data collection efforts.

The StatsRRTC is an interdisciplinary effort of two organizations at Cornell University: the Employment and Disability Institute, and the Department of Policy Analysis and Management. In addition, expertise is drawn from the following collaborating institutions: American Association of People with Disabilities (AAPD), Center for an Accessible Society, InfoUse, and Mathematica Policy Research, Inc.

The StatsRRTC is funded by the U.S. Department of Education, National Institute on Disability and Rehabilitation Research (No. H133B031111). The contents of this paper do not necessarily represent the policy of the Department of Education, and you should not assume endorsement by the Federal Government (Edgar, 75.620 (b)).

StatsRRTC Co-Principal Investigators

Susanne M. Bruyere: Director, Employment and Disability Institute, School of Industrial and Labor Relations, Extension Division, Cornell University

Richard V. Burkhauser: Sarah Gibson Blanding Professor, Department of Policy Analysis and Management, College of Human Ecology, Cornell University

David C. Stapleton: Mathematica Policy Research, Center for Disability Policy
