Social Security: The Trust Fund

Abstract

The Social Security program pays benefits to retired or disabled workers and their family members, and to family members of deceased workers. Program income and outgo are accounted for in two separate trust funds authorized under Title II of the Social Security Act: the Federal Old-Age and Survivors Insurance (OASI) trust fund and the Federal Disability Insurance (DI) trust fund. This report refers to the two trust funds as an aggregate Social Security trust fund and discusses the operations of the OASI and DI trust funds on a combined basis.

This report covers the basics of how the Social Security program is financed and how the Social Security trust fund works. It will be updated annually to reflect current projections of the financial status of the Social Security trust fund.

CRS Report for Congress

Prepared for Members and Committees of Congress

Summary

The Social Security program pays benefits to retired or disabled workers and their family members, and to family members of deceased workers. Program income and outgo are accounted for in two separate trust funds authorized under Title II of the Social Security Act: the Federal Old-Age and Survivors Insurance (OASI) trust fund and the Federal Disability Insurance (DI) trust fund. This report refers to the two trust funds as an aggregate Social Security trust fund and discusses the operations of the OASI and DI trust funds on a combined basis.

Social Security is financed by payroll taxes paid by covered workers and their employers, federal income taxes paid by some beneficiaries on a portion of their benefits, and interest income from the Social Security trust fund investments. Social Security tax revenues are invested in federal government securities (special issues) held by the trust fund, and these federal government securities earn interest. The revenues exchanged for the federal government securities are deposited into the general fund of the U.S. Treasury and are indistinguishable from revenues in the general fund that come from other sources. Because the assets held by the trust fund are federal government securities, the trust fund balance represents the amount of money owed to the Social Security trust fund by the general fund of the U.S. Treasury. Funds needed to pay Social Security benefits and administrative expenses come from the redemption or sale of federal government securities held by the trust fund.

The Social Security trust fund represents funds dedicated to pay current and future Social Security benefits. However, it is useful to view the trust fund in two ways: (1) as an internal federal accounting concept and (2) as the accumulated holdings of the Social Security program.

For internal accounting purposes, certain accounts within the U.S. Treasury are designated by law as trust funds to track revenues (and expenditures) dedicated for specific purposes. There are a number of trust funds in the U.S. Treasury, including those for Social Security, Medicare, unemployment compensation, and federal employee retirement.

By law, Social Security tax revenues must be invested in U.S. government obligations (debt instruments of the U.S. government). The accumulated holdings of U.S. government obligations are often viewed as being similar to assets held by any other trust on behalf of the beneficiaries. However, the holdings of the Social Security trust fund differ from those of private trusts because (1) the types of investments the trust fund may hold are limited and (2) the U.S. government is both the buyer and seller of the investments.

This report covers the basics of how the Social Security program is financed and how the Social Security trust fund works. It will be updated annually to reflect current projections of the financial status of the Social Security trust fund.

Introduction

The Social Security program pays benefits to retired or disabled workers and their family members, and to the family members of deceased workers. As of April 2013, there were 57.3 million Social Security beneficiaries. Approximately 65% of those beneficiaries were retired workers and 16% were disabled workers. The remaining beneficiaries were survivors, or the spouses and children of retired or disabled workers.¹

Social Security is financed by payroll taxes paid by covered workers and their employers, federal income taxes paid by some beneficiaries on a portion of their benefits, and interest income from the Social Security trust fund investments. Social Security tax revenues are invested in federal government securities (special issues) held by the trust fund, and these federal government securities earn interest. The revenues exchanged for the federal government securities are deposited into the general fund of the U.S. Treasury and are indistinguishable from revenues in the general fund that come from other sources. Because the assets held by the trust fund are federal government securities, the trust fund balance represents the amount of money owed to the Social Security trust fund by the general fund of the Treasury. Funds needed to pay Social Security benefits and administrative expenses come from the redemption or sale of federal government securities held by the trust fund.²

The Secretary of the Treasury (as the Managing Trustee of the Social Security trust fund) is required by law to invest Social Security revenues in securities backed by the U.S. government.³ The purchase of government securities allows any surplus Social Security revenues to be used for other (non-Social Security) government spending needs at the time.⁴

The Social Security trust fund is both a designated account within the Treasury and the accumulated holdings of special U.S. government obligations. Both represent the funds designated to pay current and future Social Security benefits.

How the Social Security Program Is Financed

The Social Security program is financed primarily by revenues from Federal Insurance Contributions Act (FICA) taxes and Self Employment Contributions Act (SECA) taxes. FICA taxes are paid by both employers and employees, but it is employers who remit the taxes to the Treasury. Employers remit FICA taxes on a regular basis throughout the year (for example, weekly, monthly, quarterly or annually), depending on the employer's level of total employment taxes (including FICA and federal personal income tax withholding). The FICA tax rate of 7.65% each for employers and employees has two components: 6.2% for Social Security and 1.45% for Medicare Hospital Insurance. The SECA tax rate is 15.3% for self-employed individuals, with

Kunkel, January 1999, at <http://www.ssa.gov/OACT/NOTES/n1990s.html>.

⁴ This is often referred to as “borrowing from the Social Security trust fund.”

12.4% for Social Security and 2.9% for Medicare Hospital Insurance. The respective Social Security contribution rates are levied on covered wages/net self-employment income up to \$113,700 in 2013.⁵ Self-employed individuals may deduct one-half of the SECA taxes for federal income tax purposes.⁶ SECA taxes are normally paid once a year as part of filing an annual individual income tax return.

In addition to Social Security payroll taxes, the Social Security program has two other sources of income. Certain Social Security beneficiaries must include a portion of Social Security benefits in taxable income for the federal income tax, and the Social Security program receives part of those taxes.⁷ In addition, the Social Security program receives interest from the Treasury on its investments in special federal government obligations.

The Internal Revenue Service (IRS) processes the tax returns and tax payments for federal employment taxes and federal individual income taxes. All of the tax payments are deposited in the Treasury along with all other receipts from the public for the federal government.

Temporary Payroll Tax Reduction for Workers in 2011 and 2012

As noted above, under current law, the Social Security payroll tax rate is 6.2% for employers and employees (each) and 12.4% for the self-employed. There was a temporary reduction in the payroll tax rate for workers in 2011 and 2012. On December 17, 2010, President Obama signed into law H.R. 4853, the Tax Relief, Unemployment Insurance Reauthorization, and Job Creation Act of 2010 (P.L. 111-312). Title VI of the law provided a temporary reduction of 2 percentage points in the payroll tax rate for employees and the self-employed in 2011. As a result, the Social Security payroll tax rate was 4.2% for employees and 10.4% for the self-employed in 2011. P.L. 111-312 made no changes to the payroll tax rate for employers (6.2%) or to the amount of wages/net self-employment income subject to the payroll tax (\$106,800 in 2011).

To protect the Social Security trust fund from a loss of revenues resulting from the temporary reduction in the payroll tax rate for employees and the self-employed, P.L. 111-312 appropriated to the Social Security trust fund amounts equal to the reduction in revenues to the Treasury. The law specified that these appropriated amounts “shall be transferred from the general fund at such times and in such manner as to replicate to the extent possible the transfers that would have occurred to such Trust Fund had such amendments not been enacted.”⁸

On December 23, 2011, President Obama signed into law H.R. 3765, the Temporary Payroll Tax Cut Continuation Act of 2011 (P.L. 112-78), which extended the payroll tax reduction for workers

⁵ The limit on wages and net self-employment income subject to the Social Security payroll tax (the taxable wage base) is adjusted annually based on average wage growth, if a Social Security cost-of-living adjustment (COLA) is payable. Because no COLA was payable in 2010 and 2011, the taxable wage base remained at its 2009 level (\$106,800) in 2010 and 2011. The Medicare Hospital Insurance component of the FICA and SECA tax is levied on total wages. For more information on the COLA, see CRS Report 94-803, *Social Security: Cost-of-Living Adjustments*, by Gary Sidor.

⁶ Self-employed individuals are required to pay Social Security payroll taxes if they have annual net earnings of \$400 or more. Only 92.35% of net self-employment income (up to the annual limit) is taxable.

⁷ The taxes associated with including Social Security benefits in federal taxable income go to the Social Security trust fund and the Medicare Hospital Insurance trust fund. See CRS Report RL32552, *Social Security: Calculation and History of Taxing Benefits*, by Christine Scott.

⁸ The text of P.L. 111-312 is available at <http://www.gpo.gov/fdsys/pkg/PLAW-111publ312/pdf/PLAW-111publ312.pdf>. Title VI, Temporary Employee Payroll Tax Cut, is on pages 124 STAT. 3309-10.

for two months (i.e., through the end of February 2012). Subsequently, on February 22, 2012, President Obama signed into law H.R. 3630, the Middle Class Tax Relief and Job Creation Act of 2012 (P.L. 112-96), which further extended the payroll tax reduction for workers through the end of calendar year 2012.⁹

The Social Security Trust Fund as a Designated Account

Within the U.S. Treasury, there are numerous accounts established for internal accounting purposes. Although all of the monies within the Treasury are federal monies, the designation of an account as a trust fund allows the government to track revenues (and expenditures) dedicated for specific purposes. In addition, the government can affect the level of revenues and expenditures associated with a trust fund through changes in the law. Social Security program income and outgo are accounted for in two separate trust funds authorized under Title II of the Social Security Act: (1) the Federal Old-Age and Survivors Insurance (OASI) trust fund and (2) the Federal Disability Insurance (DI) trust fund.¹⁰ This report refers to the two separate trust funds as an aggregate Social Security trust fund and discusses the operations of the OASI and DI trust funds on a combined basis.

Social Security Trust Fund Revenues

The Social Security trust fund receives a credit equal to the Social Security payroll taxes deposited in the Treasury by the IRS.¹¹ The payroll taxes are allocated between the OASI and DI trust funds based on a proportion specified by law.¹² Currently, of the 6.2% payroll tax rate, 5.3% is allocated to the OASI trust fund and 0.9% is allocated to the DI trust fund.¹³

Social Security Trust Fund Costs

The Treasury makes Social Security benefit payments to entitled individuals on a monthly basis. The Treasury is directed by the Social Security Administration (SSA) as to whom to pay and the amount of the payment. When benefit payments are made by the Treasury, the Social Security trust fund is debited for the payments. Periodically, the Social Security trust fund is also debited for the administrative costs of the Social Security program. These administrative costs are incurred by several government agencies, including SSA, the Treasury, and the IRS.

⁹ For more information, see CRS Report R41648, *Social Security: Temporary Payroll Tax Reduction*, by Dawn Nuschler.

¹⁰ Social Security Act, Title II, §201.

¹¹ In addition, a portion of the federal income taxes paid on Social Security benefits and the interest income on Social Security trust fund investments are credited to the Social Security trust fund.

¹² Social Security Act, Title II, §201(b).

¹³ The share allocated to the DI trust fund was last changed (to 0.9%) in 2000, under a schedule established in 1994 under P.L. 103-387. The proportional split between the OASI and DI trust funds has been altered five times since 1985.

Social Security Trust Fund Operations

The annual revenues to the Social Security trust fund are used to pay current Social Security benefits and administrative expenses. If, in any year, revenues are greater than costs, the surplus Social Security revenues in the Treasury are available for spending by the government on other (non-Social Security) spending needs at the time. If, in any year, costs are greater than revenues, the cash flow deficit is offset by selling some of the accumulated holdings of the trust fund (government securities) to help pay benefits and administrative expenses.

There are two measures of Social Security trust fund operations: the annual cash flow operations and the accumulated holdings (or trust fund balance).¹⁴ The annual cash flow operations of the Social Security trust fund are a measure of current revenues and current costs. The cash flow operations are positive when current revenues exceed costs (a cash flow surplus) and negative when current costs exceed revenues (a cash flow deficit). In years with cash flow deficits, the Social Security program (unlike other federal programs that operate without a trust fund) may use the accumulated holdings of the Social Security trust fund from prior years to help pay benefits and administrative expenses.¹⁵

Although Social Security is a pay-as-you-go system, meaning that current revenues are used to pay current costs, changes made to the Social Security program in 1983 began a sustained period of annual cash flow surpluses through 2009.¹⁶ Since 2010, however, Social Security has had annual cash flow deficits (program costs exceeded tax revenues), and the 2013 Annual Report projects that annual cash flow deficits will continue throughout the 75-year projection period (2013-2087), under the intermediate assumptions.¹⁷

The 2013 Annual Report projects that the Social Security trust fund will remain solvent until 2033. Social Security benefits scheduled under current law can be paid in full and on time until then. This is the same trust fund exhaustion date projected in the 2012 Annual Report. In addition, the average 75-year actuarial deficit for the trust fund is projected to be equal to 2.72% of taxable payroll. This is an increase of 0.05 percentage point from the projection in the 2012 Annual Report. With respect to the change in the projected 75-year actuarial deficit, the trustees state,

¹⁴ The accumulated holdings of the Social Security trust fund in U.S. government obligations are also referred to as the Social Security trust fund balance.

¹⁵ Certain government projects may be given “budget authority until expended,” which allows the authority to spend funds on the project to be carried over each year until all of the authority to spend funds has been exhausted.

¹⁶ The Social Security Amendments of 1983 (P.L. 98-21) made a number of program changes, including the coverage of federal workers, an increase in the full retirement age and the taxation of Social Security benefits. For more information on the 1983 amendments, see CRS Report RL30920, *Major Decisions in the House and Senate on Social Security: 1935-2012*, by Gary Sidor.

¹⁷ The Social Security Board of Trustees is composed of three officers of the President’s cabinet (the Secretary of the Treasury, the Secretary of Labor and the Secretary of Health and Human Services), the Commissioner of Social Security and two public representatives who are appointed by the President and subject to confirmation by the Senate. The Board of Trustees issues an annual report to Congress on the financial status of the Social Security trust fund. The trustees make three sets of projections based on low-cost, intermediate and high-cost assumptions reflecting the uncertainty surrounding projections for a 75-year period. The trust fund projections cited in this CRS report are based on the intermediate (or “best estimate”) assumptions of The 2013 Annual Report of the Board of Trustees of the Federal Old-Age and Survivors Insurance and Federal Disability Insurance Trust Funds, Washington, DC, May 31, 2013, available at <http://www.socialsecurity.gov/oact/tr/2013/tr2013.pdf>. (Hereafter cited as 2013 Annual Report.)

The actuarial deficit increased by about 0.06 percent of payroll solely due to advancing the valuation date by one year and including the year 2087. The effects of recently enacted legislation, updated demographic data and assumptions, and updated economic data and assumptions worsened the actuarial deficit, but these effects were offset by updated programmatic data and improved methodologies, causing little additional change in the actuarial deficit.¹⁸

As noted above, on a combined basis, the Social Security trust fund is projected to remain solvent until 2033. Separately, however, the OASI trust fund is projected to remain solvent until 2035 and the DI trust fund is projected to remain solvent until 2016. These are the same OASI and DI trust fund exhaustion dates projected in the 2012 Annual Report. Under current law, DI benefits could not be paid in full and on time following DI trust fund exhaustion in 2016. With respect to the DI trust fund, the trustees state, “... the DI Trust Fund reserves become depleted in 2016, at which time continuing income to the DI Trust Fund would be sufficient to pay 80 percent of DI benefits. Therefore, legislative action is needed as soon as possible to address the DI program’s financial imbalance. In the absence of a long-term solution, lawmakers could choose to reallocate a portion of the payroll tax rate between OASI and DI, as they did in 1994.”¹⁹

Table 1 shows the annual cash flow operations of the Social Security trust fund (revenues, costs, and cash flow surpluses/deficits) for the historical period 1957 to 2012. From 1957 to 1983 (the last time Congress enacted major amendments to the program), the Social Security trust fund operated with a cash flow deficit (costs exceeded revenues) in 19 of the 27 years. Since 1984, the trust fund has operated with a cash flow deficit in three of the past 29 years (2010 to 2012).

Table 1. Annual Revenues, Costs, and Cash Flow Surpluses or Deficits for the Social Security Trust Fund, 1957-2012

(\$ in billions)

Year	Annual Revenues (non-interest income) ^a	Annual Costs	Annual Cash Flow Surpluses or Deficits (annual revenues less annual costs)

2030	1,798.1	2,258.4	(460.3)
2031	1,878.2	2,377.4	(499.2)
2032	1,961.8	2,499.4	(537.6)

Source: Table prepared CRS from data provided in the 2013 Annual Report, Table VI.F8 (intermediate assumptions).

- a. Projections for years after 2032 are not shown because the Social Security trust fund is projected to be exhausted in 2033 under the intermediate assumptions.
- b. Annual revenues (or non-interest income) are equal to total income minus interest income.

One way to measure the annual cash flow operations over time is to take the ratio of current revenues to current costs for each year. A ratio greater than 100% indicates positive cash flow (a cash flow surplus); a ratio less than 100% indicates negative cash flow (a cash flow deficit).

Figure 1 shows the ratio of current revenues to current costs for the Social Security trust fund each year over the historical period 1957 to 2012 and over the 2013 to 2032 period, as projected by the Social Security trustees in the 2013 Annual Report (under the intermediate assumptions).²⁰

As shown in the figure, in 2009, revenues of \$689.2 billion divided by costs of \$685.8 billion results in a ratio just over 100% (100.5%), indicating a cash flow surplus for the Social Security trust fund. By comparison, in 2012, revenues of \$731.1 billion divided by costs of \$785.8 billion results in a ratio of 93.0%, indicating a cash flow deficit for the Social Security trust fund. In the 2013 Annual Report, the Social Security trustees project that the ratio of current revenues to current costs will remain below 100% for the remainder of the projection period, with the gap between revenues and costs increasing over time (under the intermediate assumptions).

²⁰ 2013 Annual Report, Tables VI.A3 and VI.F8.

Figure I. Ratio of Current (Annual) Revenues to Costs for the Social Security Trust Fund, 1957-2032

Source: Figure prepared by the Congressional Research Service (CRS) from data provided in the 2013 Annual Report, Tables VI.A3 and VI.F8 (intermediate assumptions).

Notes: Annual revenues do not include interest on accumulated holdings of U.S. government obligations. A ratio above 100% indicates a cash flow surplus for the year. A ratio below 100% indicates a cash flow deficit.

When the Social Security trust fund operates with a cash flow deficit, benefits can be paid by the Treasury at levels scheduled under current law as long as the accumulated balance in the Social Security trust fund is positive. This is because the Social Security program has budget authority to pay benefits as long as the balance in the Social Security trust fund (the designated account) is positive. When current revenues are not sufficient to pay benefits, however, the U.S. government must raise the funds necessary to honor the redemption of U.S. government obligations held by the Social Security trust fund as they are needed to pay benefits. If there are no surplus governmental receipts, the U.S. government may raise the necessary funds by increasing taxes or other income, reducing other spending, borrowing from the public (i.e., replacing bonds held by the trust fund with bonds held by the public), or some combination of these measures.

Investment of the Social Security Trust Fund

The Secretary of the Treasury is required by law to invest Social Security revenues in securities backed by the U.S. government.²¹ In addition, the Social Security trust fund receives interest on its holdings of special U.S. government obligations. Each government security issued by the Treasury for purchase by the Social Security trust fund must be a paper instrument in the form of a bond, note, or certificate of indebtedness.²² Specifically, Section 201(d) of the Social Security Act states,

Each obligation issued for purchase by the Trust Funds under this subsection shall be evidenced by a paper instrument in the form of a bond, note, or certificate of indebtedness issued by the Secretary of the Treasury setting forth the principal amount, date of maturity, and interest rate of the obligation, and stating on its face that the obligation shall be incontestable in the hands of the Trust Fund to which it is issued, that the obligation is supported by the full faith and credit of the United States, and that the United States is pledged to the payment of the obligation with respect to both principal and interest. The Managing Trustee may purchase other interest-bearing obligations of the United States or obligations guaranteed as to both principal and interest by the United States, on original issue or at the market price, only where he determines that the purchase of such other obligations is in the public interest.

Any interest or proceeds from the sale of government securities held by the Social Security trust fund must be paid in the form of paper checks from the general fund of the Treasury to the Social Security trust fund.²³ The interest rates paid on the government securities issued to the Social Security trust fund are tied to market rates.²⁴

For internal federal accounting purposes, when special U.S. government obligations are purchased by the Social Security trust fund, the Treasury is shifting surplus Social Security revenues from one government account (the Social Security trust fund) to another government account (the Treasury's "general fund" account). The special U.S. government obligations are physical documents held by the Social Security Administration, not the U.S. Treasury. The government securities held by the Social Security trust fund are redeemed on a regular basis. These special U.S. government obligations, however, are not resources for the government because they represent both an asset and a liability for the government.

The Social Security Trust Fund and the Federal Budget

The Social Security program is indirectly part of the annual congressional budget process. This creates some confusion on the part of the public.

²¹ Social Security Act, Title II, §201(d). For more information, see Social Security Administration, Office of the Chief Actuary, Actuarial Note Number 142, *Social Security Trust Fund Investment Policies and Practices*, by Jeffrey L. Kunkel, January 1999, at <http://www.ssa.gov/OACT/NOTES/n1990s.html>.

²² Social Security Act, Title II, §201(d).

²³ Social Security Act, Title II, §201(f). The funds are then used to purchase additional government securities credited to the Social Security trust fund.

²⁴ For more information, see CRS Report RS20607, *Social Security: Trust Fund Investment Practices*, by Dawn Nuschler.

On-Budget Versus Off-Budget

For federal budget purposes, *on-budget* status generally refers to programs that are included in the annual congressional budget process, whereas *off-budget* status generally refers to programs that are not included in the annual congressional budget process.

The Social Security program is a government program that, like the Postal Service, has had its receipts and (most) outlays designated by law as off-budget.²⁵ The off-budget designation, however, has no practical effect on program funding, spending or operations. The annual congressional budget resolution, in its legislative language, separates the off-budget totals (receipts and outlays) from the on-budget totals (receipts and outlays). The report language accompanying the congressional budget resolution usually shows the unified budget totals (which combine the on- and off-budget amounts) as well as the separate on- and off-budget totals. The President's budget tends to use the unified budget measures in discussing the budget totals. The President's budget documents also include the totals for the on- and off-budget components, as required by law. The Congressional Budget Office uses the unified budget numbers in its analyses of the budget; it generally does not include on- and off-budget data in its regular annual reports.

The unified budget framework is important because it includes all federal receipts and outlays providing a more comprehensive picture of the size of the federal government, as well as the impact of the federal budget on the economy. In the unified budget, the Social Security program is a large source of federal receipts (approximately 23% in FY2012) and federal outlays (approximately 22% in FY2012).²⁶ For purposes of the unified budget, the annual Social Security cash flow surplus or deficit is counted in determining the overall federal budget surplus or deficit.

The Social Security Trust Fund as Accumulated Holdings

The Social Security trust fund can be (and often is) viewed as a trust fund, similar to any private trust fund, that is to be used for paying current and future benefits (and administrative expenses). By law, Social Security revenues credited to the trust fund (within the U.S. Treasury) are invested in non-marketable U.S. government obligations. These obligations are physical (paper) documents issued to the trust fund and held by the Social Security Administration. When the obligations are redeemed, the Treasury must issue a check (a physical document) to the Social Security trust fund for the interest earned on the obligations.²⁷

Unlike a private trust that may hold a variety of assets and obligations of different borrowers, the Social Security trust fund can hold only U.S. government obligations. The sale of these obligations by the U.S. government to the Social Security trust fund is federal government

²⁵ Although the Social Security program is off-budget, the annual congressional budget process does provide the budget authority for Social Security administrative spending. SSA's administrative funding, which is paid for out of the Social Security trust fund, is subject to an annual appropriated limit. In contrast, the Social Security program has budget authority to pay benefits as long as the balance in the Social Security trust fund (the designated account) is positive.

²⁶ Percentages calculated by the Congressional Research Service (CRS) from data provided in: Office of Management and Budget, *Historical Tables, Budget of the U.S. Government, Fiscal Year 2014*, Tables 2.1, 2.4, 6.1 and 13.1.

²⁷ The funds are then used to purchase additional government securities credited to the Social Security trust fund.

borrowing (from itself) and counts against the federal debt limit. The requirement that the Social Security trust fund purchase U.S. government obligations serves several purposes, such as

- offering a mechanism for the Social Security program to recoup the surplus revenues loaned to the rest of the government;
- paying interest so that the loan of the surplus revenues does not lose value over time;
- ensuring that the Social Security trust fund (and not other government accounts) receives credit for the interest earnings;
- ensuring a level of return (interest) to the Social Security trust fund; and
- providing a means outside of the securities market for the U.S. government to borrow funds.

The accumulated holdings of the Social Security trust fund represent the sum of annual surplus Social Security revenues (for all past years) which were invested in U.S. government obligations, plus the interest earned on those obligations. As a result of surplus Social Security revenues from 1984 to 2009 and the interest income credited to the Social Security trust fund, the accumulated holdings of the Social Security trust fund totaled \$2.7 trillion at the end of calendar year 2012. It is the accumulated holdings of the Social Security trust fund (or the trust fund balance) that many people refer to when discussing the Social Security trust fund. **Table 3** shows the accumulated holdings of the Social Security trust fund for the historical period 1957 to 2012. **Table 4** shows the projected accumulated holdings of the Social Security trust fund for the 2013 to 2032 period, as projected by the Social Security trustees in the 2013 Annual Report (under the intermediate assumptions). The Social Security trustees project that the level of accumulated trust fund holdings will continue to increase from 2013 through 2020, due to interest income to the trust fund. Under the current projections, the level of accumulated holdings will begin to decline in 2021 (the same year as projected in the 2012 Annual Report), and the Social Security trust fund will be exhausted in 2033.²⁸

The Social Security trustees project that, on average over the next 75 years (2013 to 2087), program costs will exceed income by an amount equal to 2.72% of taxable payroll (on average, costs are projected to exceed income by about 20%).²⁹ The gap between income and costs, however, is projected to increase over the 75-year period. For example, in 2035, the cost of the program is projected to exceed income by an amount equal to 3.82% of taxable payroll (costs are projected to exceed income by about 29%). By 2085, the cost of the program is projected to exceed income by an amount equal to 4.67% of taxable payroll (costs are projected to exceed income by about 35%).

²⁸ Under the intermediate assumptions of the 2013 Annual Report, the Social Security trustees project that program costs will exceed total income (tax revenues plus interest income) beginning in 2021. At that point, the trust fund balance will begin to be drawn down to help pay benefits and administrative expenses. The trustees project that the assets (government securities) held by the trust fund will be exhausted in 2033. Following the exhaustion of trust fund reserves, the program would continue to operate with incoming receipts.

²⁹ Program costs and income are evaluated as a percentage of taxable payroll because Social Security payroll taxes are the primary source of funding for the program. The 75-year “open group unfunded obligation” for the Social Security program is \$9.6 trillion (in present value terms).

The Social Security trustees project that the Social Security trust fund would remain solvent throughout the 75-year projection period if, for example,

- revenues were increased by an amount equivalent to an immediate and permanent payroll tax rate increase of 2.66 percentage points (from 12.40% to 15.06%);³⁰
- benefits scheduled under current law were reduced by an amount equivalent to an immediate and permanent reduction of (a) 16.5% if applied to all current and future beneficiaries, or (b) 19.8% if applied only to those who become eligible for benefits in 2013 or later; or
- some combination of these approaches was adopted.³¹

Table 3. Accumulated Holdings of the Social Security Trust Fund, 1957-2012

(\$ in billions)

Year	Accumulated Holdings ^a
1957	\$23.0
1958	23.2
1959	22.0
1960	22.6
1961	22.2
1962	20.7
1963	20.7
1964	21.2
1965	19.8
1966	22.3
1967	26.3
1968	28.7
1969	34.2
1970	38.1
1971	40.4
1972	42.8

³⁰ The Social Security trustees explain that the projected increase in the payroll tax rate needed for the trust fund to remain solvent throughout the 75-year projection period (2.66 percentage points) differs from the projected 75-year actuarial deficit (2.72% of taxable payroll) for two reasons. The trustees state on page 4 of the 2013 Annual Report: “First, the necessary tax rate is the rate required to maintain solvency throughout the period that does not result in any trust fund reserve at the end of the period, whereas the actuarial deficit incorporates an ending trust fund reserve equal to 1 year’s cost. Second, the necessary tax rate reflects a behavioral response to tax rate changes, whereas the actuarial deficit does not. In particular, the calculation of the necessary tax rate assumes that an increase in payroll taxes results in a small shift of wages and salaries to forms of employee compensation that are not subject to the payroll tax.”

2032	281.8

Source: Table prepared by the Congressional Research Service (CRS) from data provided in the 2013 Annual Report, Table VI.F8 (intermediate assumptions). Accumulated holdings are end-of-year totals.

- a. Projections for years after 2032 are not shown because the Social Security trust fund is projected to be exhausted in 2033 under the intermediate assumptions.
- b. The accumulated holdings of the Social Security trust fund are also referred to as the trust fund balance.

The Social Security Trust Fund and the Level of Federal Debt

As part of the annual congressional budget process, the level of federal debt (the federal debt limit) is set for the budget by Congress. The federal debt limit includes debt held by the public as well as the internal debt of the U.S. government (i.e., debt held by government accounts). Borrowing from the public and the investment of the Social Security trust fund in special U.S. government obligations both fall under the restrictions of the federal debt limit. This means that the Social Security trust fund balance has implications for the federal debt limit.

For a discussion of how reaching the debt limit potentially could affect Social Security trust fund investment practices and benefit payments, see CRS Report R41633, *Reaching the Debt Limit: Background and Potential Effects on Government Operations*, coordinated by Mindy R. Levit.

The Social Security Trust Fund and Benefit Payments

The accumulated holdings of the Social Security trust fund, which represent budget authority for the program, can be viewed as a measure of funds dedicated to pay current and future benefits. However, when current tax revenues are below levels needed to pay benefits,³² these funds (the accumulated holdings) are available to pay benefits only as the government raises the resources necessary to pay for the securities as they are redeemed by the Social Security trust fund. The securities are a promise, by the U.S. government, to raise the necessary funds.³³ When the system is operating with a cash flow surplus, the surplus Social Security revenues (which are invested in government securities held by the trust fund) are used to fund other government activities at the time. The surplus Social Security revenues, therefore, are not available to finance benefits directly when the system is operating with a cash flow deficit.

Stated another way, when the Social Security trust fund runs a cash flow deficit, the trust fund cashes in more federal government securities than the amount of current Social Security tax revenues, relying in part on accumulated trust fund holdings to pay benefits and administrative expenses. Because the federal government securities held by the trust fund are redeemed with general revenues, this results in increased spending for Social Security from the general fund. With respect to the Social Security program's reliance on general revenues, it is important to note that the program is relying on revenues collected for Social Security purposes in previous years that were used by the federal government at the time for other (non-Social Security) spending needs and interest income earned on trust fund investments. The program draws on those previously collected Social Security tax revenues and interest income when current Social Security tax revenues fall below current program expenditures.

The Social Security trustees project that the accumulated holdings of the Social Security trust fund will be exhausted in 2033. At that time, the program will continue to operate with incoming receipts to the trust fund that are projected to equal about 77% of program costs. By the end of the 75-year projection period (2087), incoming receipts are projected to equal about 72% of program

³² In the 2013 Annual Report, the Social Security trustees project that revenues will remain below program costs each year throughout the 75-year projection period (2013-2087), under the intermediate assumptions.

³³ If there are no surplus governmental receipts, the U.S. government may raise the necessary funds by increasing taxes or other income, reducing other spending, borrowing from the public (i.e., replacing bonds held by the trust fund with bonds held by the public), or some combination of these measures.

costs (based on the intermediate assumptions of the 2013 Annual Report).³⁴ The Social Security Act does not state what would happen to the payment of benefits scheduled under current law in the event of Social Security trust fund exhaustion. Two possible scenarios are (1) the payment of full monthly benefits on a delayed schedule or (2) the payment of partial (reduced) monthly benefits on time.³⁵
