The Worker Adjustment and Retraining Notification Act (WARN)

Abstract
[Excerpt] Congress has passed legislation to facilitate the reemployment of workers who through no fault of their own are terminated by their employers. Statutes include the Workforce Investment Act, which provides various reemployment services to dislocated workers among others; the Trade Adjustment Assistance program for workers, which provides reemployment services to trade-affected displaced workers; and the Worker Adjustment and Retraining Notification (WARN) Act, which provides advance notice of mass layoffs and plant closings. Congress enacted the WARN Act (P.L. 100-379) in 1988 after lengthy contentious debate. There was little interest in the law during the decade following its passage because generally robust economic conditions prevailed. Interest has renewed in the current decade for a variety of reasons, including the growth in offshore outsourcing (offshoring) of U.S. jobs and perceived shortcomings of the WARN Act. Most recently, S. 1792 and H.R. 3662 were introduced. The bills would amend the statute to require more businesses to provide notice to more workers and lengthen the notice period. They also would increase the back pay penalty for violation of the law and authorize the Secretary of Labor to bring civil action on behalf of workers as well as make educational materials more readily available. While S. 1792 would require employers to notify the U.S. Department of Labor of covered plant closings and mass layoffs after they had occurred, H.R. 3662 would require advance notice to be given to the Secretary of Labor and to U.S. senators and representatives, state senators and representatives, and state governors in the areas in which the plant is located. The WARN Act now requires employers to provide written notice to displaced workers or their representatives, state dislocated worker units or entities designated by the state to carry out rapid response activities, and the chief elected official of a unit of local government at least 60 days before a plant closing or mass layoff is expected to occur. Shorter notice may be provided in three instances. There are a number of other exceptions to and exemptions from the notification requirement. Relatively small businesses and small short-term layoffs are not subject to the WARN Act. Firms with 100 or more employees, excluding part-time employees, must provide advance notice. A plant closing is a shutdown of a work site that produces job losses for at least 50 employees (other than part-time employees) within any 30-day period. A mass layoff is an employment loss at a job site within any 30-day period affecting (a) 50-499 employees (excluding part-timers) if they make up at least one-third of an employer's workforce (excluding part-timers), or (b) at least 500 employees (excluding part-time employees). Employees, their representatives, or units of local government can bring civil actions against employers thought to have violated the act. DOL does not have any investigative or enforcement authority under the law. The maximum liability of employers is back pay and benefits for each day that notice was not provided, although the amount of the penalty may be reduced.

The Worker Adjustment and Retraining Notification Act (WARN)

Summary

Congress has passed legislation to facilitate the reemployment of workers who through no fault of their own are terminated by their employers. Statutes include the Workforce Investment Act, which provides various reemployment services to dislocated workers among others; the Trade Adjustment Assistance program for workers, which provides reemployment services to trade-affected displaced workers; and the Worker Adjustment and Retraining Notification (WARN) Act, which provides advance notice of mass layoffs and plant closings.

Congress enacted the WARN Act (P.L. 100-379) in 1988 after lengthy contentious debate. There was little interest in the law during the decade following its passage because generally robust economic conditions prevailed. Interest has renewed in the current decade for a variety of reasons, including the growth in offshore outsourcing (offshoring) of U.S. jobs and perceived shortcomings of the WARN Act. Most recently, S. 1792 and H.R. 3662 were introduced. The bills would amend the statute to require more businesses to provide notice to more workers and lengthen the notice period. They also would increase the back pay penalty for violation of the law and authorize the Secretary of Labor to bring civil action on behalf of workers as well as make educational materials more readily available. While S. 1792 would require employers to notify the U.S. Department of Labor of covered plant closings and mass layoffs after they had occurred, H.R. 3662 would require advance notice to be given to the Secretary of Labor and to U.S. senators and representatives, state senators and representatives, and state governors in the areas in which the plant is located.

The WARN Act now requires employers to provide written notice to displaced workers or their representatives, state dislocated worker units or entities designated by the state to carry out rapid response activities, and the chief elected official of a unit of local government at least 60 days before a plant closing or mass layoff is expected to occur. Shorter notice may be provided in three instances. There are a number of other exceptions to and exemptions from the notification requirement.

Relatively small businesses and small short-term layoffs are not subject to the WARN Act. Firms with 100 or more employees, excluding part-time employees, must provide advance notice. A plant closing is a shutdown of a work site that produces job losses for at least 50 employees (other than part-time employees) within any 30-day period. A mass layoff is an employment loss at a job site within any 30-day period affecting (a) 50-499 employees (excluding part-timers) if they make up at least one-third of an employer’s workforce (excluding part-timers), or (b) at least 500 employees (excluding part-time employees).

Employees, their representatives, or units of local government can bring civil actions against employers thought to have violated the act. DOL does not have any investigative or enforcement authority under the law. The maximum liability of employers is back pay and benefits for each day that notice was not provided, although the amount of the penalty may be reduced.

The Worker Adjustment and Retraining Notification Act (WARN)

The Worker Adjustment and Retraining Notification (WARN) Act is one of the pieces of legislation that Congress has passed to facilitate the reemployment of workers who through no fault of their own lose their jobs. Other statutes include the Workforce Investment Act, which provides a variety of reemployment services to dislocated workers (e.g., training), and the Trade Adjustment Assistance program for workers, which provides reemployment services to a subset of job losers (i.e., those harmed by trade). Although “retraining” appears in its title, the WARN Act does not authorize training. It instead requires employers that intend to carry out plant closings or large-scale layoffs to provide advance notice to enable affected workers to more quickly find new jobs.

Legislation was first introduced at the federal level in 1973 to require advance notice of plant closings and mass layoffs.\(^1\) The issue proved to be contentious and more than a decade elapsed before Congress enacted the WARN Act (P.L. 100-379) in 1988 without President Reagan’s signature.\(^2\) The law became effective in February 1989. It generated fairly little interest during a period marked by a brief mild recession at the outset of the 1990s and then by the longest economic expansion in the nation’s history (120 months).

Interest has renewed in the WARN Act during the current decade for a variety of reasons. The frequency and size of layoffs increased markedly during the latest (March-November 2001) recession and after the terrorist attacks of September 11, 2001.\(^3\) A few years later, policymakers grappling with the issue of offshore outsourcing or offshoring of U.S. jobs to other countries introduced legislation to amend the statute.\(^4\) S. 2090, which was introduced in 2004, would have included under the law employer actions that had the effect of creating, shifting, or transferring

---

\(^1\) The Trade Act of 1974 (Title II, Section 283 of P.L. 93-618) asked firms that planned to move operations outside the United States to provide at least 60 days advance notice to employees likely to be adversely affected by their actions as well as to the Secretaries of Labor and Commerce.

\(^3\) For information on mass layoffs related specifically to September 11, see the Appendix of this report. For additional information on mass layoff activity, see CRS Report RL30799, *Unemployment Through Layoffs: What Are The Reasons?*, by Linda Levine.

\(^4\) For information on offshoring, see CRS Report RL32292, *Offshoring (a.k.a. Offshore Outsourcing) and Job Insecurity among U.S. Workers*, by Linda Levine.
positions or facilities outside the United States and in so doing cause a job loss for at least 15 employees during any 30-day period. In addition, the bill would have lengthened the notification period and lowered the firm-size threshold for mass layoffs. It also would have required the Secretary of Labor to issue statistical reports based on the written notices of plant closings, mass layoffs, and offshoring that covered employers would have had to provide the Secretary. (Under current law, employers do not provide notices to the federal government.)

Two bills to amend the WARN Act have been introduced to date in the 110th Congress. S. 1792 and H.R. 3662 have several common features intended to address perceived shortcomings of the law, which has not been substantively amended since its inception some 20 years ago. The two bills would revise the law to require more firms to provide notice to more workers terminated en masse (e.g., by lowering the firm-size threshold to 50 employees, covering mass layoffs of at least 25 employees who account for one-third of an employer’s workforce or mass layoffs of at least 100 employees). The bills also would lengthen the notice period to 90 calendar days before the event, increase the back pay penalty for violation of the statute, authorize the Secretary of Labor to bring civil action on behalf of one or more workers, and require the department to make educational materials about employee rights and employer responsibilities under the act more readily available to the public. While S. 1792 would require employers to notify the Secretary of Labor after a covered event had occurred, H.R. 3662 would require notice be given in advance of a covered plant closing or mass layoff to the Secretary of Labor and to U.S. senators and representatives, state senators and representatives, and state governors in the areas in which the plant is located.

A summary of the WARN Act follows.6

**Length and Intent of the Act’s Advance Notice Requirement**

Generally, the WARN Act requires employers to provide written notice to affected workers or their representatives at least *60 days* before a plant closing or mass layoff is expected to occur. Workers affected by a mass layoff would include those who might be “bumped” from their jobs by more senior workers whose positions had been eliminated.

State dislocated worker units or entities designated by the state to carry out rapid response activities must be forewarned as well so they may provide assistance under the Workforce Investment Act for example. The chief elected official of a unit of local government also must receive notice 60 days before a plant closing or mass

---

6 See also 29 USC Chapter 23.
layoff is initiated. (See the box, “Three Reasons for a Notice Period of Less Than 60 Days,” for the three instances in which the advance notice period can be of shorter duration.)

The WARN Act does not supersede collective bargaining agreements or other laws whose terms concerning advance notice or related employee rights are superior to those of the statute (e.g., the provision of severance payments). If a state plant closing law requires employers to provide more than 60 days advance notice, the federal law’s notice period runs concurrently with the state’s requirement.

P.L. 100-379’s advance notice period is intended to afford employees time to find other jobs, obtain retraining or otherwise adjust to their soon-to-be-changed employment situation. As opposed to the termination of a few employees, large numbers of workers released into a local labor market at approximately the same time would produce keen competition for job vacancies. The job-seeking efforts of displaced workers could be particularly difficult if they are released from a declining industry in which nearby firms producing similar goods or services can offer few employment opportunities. Similarly, a declining geographic area (i.e., one with a shrinking or stagnant job base) could have much more trouble absorbing many workers laid off at once as opposed to a few employees let go from time to time.

### Three Reasons for a Notice Period of Less Than 60 Days

**The faltering company exception:** Employers can provide reduced notice for plant closings but not for mass layoffs, if they had been seeking financing or business for their faltering enterprises, thought they had a realistic chance of obtaining funds or new business sufficient to allow the facilities to remain open, and believed in good faith that giving notice would have prevented them from getting the capital or business necessary to continue their operations.

**The unforeseeable business circumstances exception:** Employers can provide reduced notice if they could not reasonably foresee the business circumstances that provoked the plant closings or mass layoffs. Dire circumstances that occurred without warning and that were outside the employer’s control could include (1) a major client terminating a large contract with the employer, (2) a strike at a supplier of key parts to the employer or (3) the swift onset of a deep economic downturn or a non-natural disaster (e.g., a terrorist attack).

**The natural disaster exception:** The occurrence of floods, earthquakes, droughts, storms, and similar effects of nature fulfill this exception to the 60-day advance notice requirement for plant closings or mass layoffs. If closings or layoffs are indirectly due to natural disasters, the exception would not apply; however, the unforeseen business circumstances exception might.
Whom Does the Act Cover?

Relatively small employers are not subject to the WARN Act. Private for-profit and non-profit employers with 100 or more employees (excluding part-time employees or the hourly equivalent\(^7\)) must provide notice of impending plant closings or mass layoffs. Neither federal, state, nor local governments are covered by P.L. 100-379, but public and quasi-public entities that engage in business and that function independently of those governments are covered if they meet the employer-size threshold.

Workers covered by the statute include hourly and salaried employees, managers, and supervisors on the employer’s payroll. Persons who are temporarily laid off or are on leave but have a reasonable expectation of being recalled also are covered and counted toward the employer-size threshold. The law does not apply to an employer’s business partners, contract employees who have an employment relationship with and are paid by another employer, and self-employed individuals.

Part-time Employees

Part-time employees are defined as persons who on average work under 20 hours per week or who have been employed fewer than six of the 12 months preceding the date on which notice is required. Part-timers thus include individuals typically thought of as seasonal (part-year) workers as well as some full-time employees (e.g., recent hires). Although part-time employees are not counted toward the threshold for determining employer coverage under the law, they nonetheless are due advance notice from covered employers.

Employees Not Entitled to Notice

Workers who are counted toward the firm-size threshold but are not entitled to advance notice include U.S. workers who are located at an employer’s facility in a foreign country and individuals who are clearly told upon being hired that their employment would be temporary (e.g., limited to the time it takes to complete a specific project). For information on other exemptions see the section in this report entitled “Exceptions to or Exemptions from P.L. 100-379.”

---

\(^7\) At least 100 full-time and part-time employees who in the aggregate work at least 4,000 hours per week exclusive of overtime hours (i.e., 4,000 hours/100 employees = 40 hours per week on average).
Closings and Layoffs to Which the Act Applies

A plant closing is defined as a permanent or temporary shutdown of one or more distinct sites of employment (e.g., an auto plant) or facilities or operating units within a single site (e.g., a photocopying department) that produces an “employment loss” for at least 50 employees, other than part-timers, at the site within any 30-day period. An action is considered a plant closing if it effectively stops the work of a unit within the site, although a few employees may remain in the facility.

A mass layoff is defined as an “employment loss” — regardless of whether any units are shut down — at a single site within any 30-day period for

- 50-499 employees (excluding part-timers) if they make up at least 33% of an employer’s active workforce (excluding part-timers), 8 or
- at least 500 employees (excluding part-timers).

P.L. 100-379 thus does not cover small layoffs.

An employer may have to provide advance notice if multiple groups of workers are laid off over time but each group is smaller during any 30-day period than the employee-size thresholds. If taken together the number of terminated workers exceeds one of the thresholds during any 90-day period, the action is considered a plant closing or mass layoff unless the employer proves that the employment losses are due to “separate and distinct actions and causes and are not an attempt by the employer to evade the requirements of” the act.

In order for the above-described plant closings or mass layoffs to trigger the advance notice requirement, the employment loss must involve

- a termination other than a discharge for cause, voluntary departure, or retirement,
- a layoff exceeding six months, or
- a more than 50% reduction in the work hours (excluding overtime hours) of individual employees during each month of any six-month period.

If an employer calls a layoff that is not expected to meet the statute’s six-month threshold for providing advance notice and the employer subsequently extends the layoff beyond six months, an employment loss will have occurred unless the extension was due to “business circumstances not reasonably foreseeable at the time of the initial layoff.” The employer must give employees advance notice when it becomes foreseeable that an extension of a short-term layoff is necessary. As in the case of multiple layoffs of small groups of employees, this provision is intended to prevent employers from evading the act’s notice requirement by prolonging a layoff that initially was too brief to meet the law’s definition of employment loss.

---

8 Actively working employees are persons currently on the employer’s payroll and in pay status at the time of the mass layoff.
Exceptions to or Exemptions from P.L. 100-379

The WARN Act contains several exceptions to or exemptions from its requirement that employers provide affected parties with 60 days notice of an impending mass layoff or plant closing. For example, the legislation specifies three instances in which a shorter period of notice is allowed (see box above). The exemption from the notice requirement of workers employed at temporary facilities or on temporary projects was mentioned previously in the discussion about who is counted toward the act’s employer-size threshold. Three other cases are taken up below.

Transfers or Reassignments

The extent of employment loss can be reduced — and hence, the need to provide notice can be minimized — under certain circumstances. If a closing or layoff takes place due to the relocation or consolidation of all or part of an employer’s business it is not considered an employment loss if before the action:

1. the employer offers to transfer an employee to another site within reasonable commuting distance and no more than a six-month break in employment occurs (regardless of whether the employee accepts or rejects the offer), or
2. the employee accepts a transfer to another site — regardless of distance — with no more than a six-month break in employment, within 30 days of the employer’s offer or of the closing/layoff, whichever is later.

Sale of a Business

The sale of all or part of a business does not in itself produce an employment loss because individuals who were employees of the seller through the sale’s effective date are thereafter considered employees of the buyer. If a covered plant closing or mass layoff takes place up to and including the effective date of the sale, it is the responsibility of the seller to provide notice. If the seller knows the buyer has definite plans to initiate a covered plant closing or mass layoff within 60 days of the purchase, the seller may give notice to affected employees as an agent of the buyer if so empowered by the buyer. If not, the buyer becomes responsible for providing the requisite advance notice.

 Strikes and Lockouts

Plant closings or mass layoffs that are the result of a strike or lockout are exempt from the notice requirement unless employers lockout employees to evade compliance with the act. “Economic strikers” whom employers permanently replace do not count toward the employee-size thresholds necessary to trigger the notice
Economic strikers are those employees who go on strike over wages, hours, or other working conditions during contract negotiations. Non-striking employees who experience an employment loss directly or indirectly associated with a strike and employees who are not members of the bargaining unit involved in the contract negotiations that prompted a lockout are entitled to advance notice.

**Enforcement and Penalties**

Employees, their representatives or units of local government can bring civil actions in federal district court against employers thought to have violated the WARN Act. A court does not have the authority to stop a plant closing or mass layoff.

The U.S. Department of Labor does not have any investigative or enforcement authority under the law. It is authorized to write regulations and to provide assistance understanding them.

Employers who violate P.L. 100-379 are liable for back pay and benefits (e.g., the cost of medical expenses that would have been covered had the employment loss not occurred) to each aggrieved employee. The penalty is calculated for each working day that notice was not provided up to a maximum of 60 days. In other words, the 60-day liability is reduced for each day that notice was provided. Maximum liability may be less than 60 days for those employees who had worked for the employer less than 120 days.

If any employer made “voluntary and unconditional payments” to terminated employees for failure to provide timely notice, the amount of the penalty may be reduced. A court also may decrease the back-pay liability if an employer’s failure to comply with the act was in “good faith” with “reasonable grounds for believing” that its closure or layoff action did not violate the law. In addition, a court may reduce the $500 a day civil fine to which a unit of local government is entitled for an employer’s violation of the statute. An employer can avoid the civil penalty entirely if each aggrieved employee is paid the full amount owed within three weeks from the date of the plant closing or mass layoff.

---

9 Economic strikers are those employees who go on strike over wages, hours, or other working conditions during contract negotiations.

10 In contrast, severance payments that the employer was legally obligated to make because of the employment loss do not diminish the employer’s liability. Similarly, payments made by third parties to terminated employees (e.g., unemployment insurance benefits) do not limit the size of the employer’s penalty.
Appendix: Layoffs Due to the September 11 Attacks

The U.S. Bureau of Labor Statistics (BLS) collects data on mass layoffs and extended mass layoffs. A mass layoff is defined as an event involving at least 50 workers from a single establishment who file initial claims for unemployment insurance (UI) benefits during a consecutive five-week period. Although mass layoff data are released monthly, limited information is collected on these potentially brief events. The BLS subsequently obtains additional data — including the reason that prompted the action — for those mass layoffs that last longer than 30 days. The detailed information on extended mass layoffs is released on a quarterly basis.

To develop a statistical portrait of the impact on layoff activity of the September 11 terrorist attacks, the BLS began asking employers whether their decision to call a layoff was directly or indirectly prompted by the events of that day. In the interest of timeliness, these results were released each month. Although the series does not cover employees let go individually or in small groups or who were just briefly laid off, it was the only federal statistical program that tracked worker displacement linked to the terrorist actions of September 2001.

For the 18-week period between mid-September 2001 and mid-January 2002, employers reported that they called 430 extended mass layoffs that were directly or indirectly attributable to the attacks. The actions involved 125,637 employees. As shown in Appendix Table A-1, the number of layoffs and workers displaced generally trended downward as time elapsed since the terrorists’ actions.

Although employers in 33 states said they released at least 50 employees for longer than 30 days as a direct or indirect result of the attacks, 72% of the layoffs and 63% of the worker separations took place in fairly few states. (See Appendix Table A-2.) The seven states were California (98 layoffs and 23,516 workers), Florida (56 layoffs and 6,896 workers), Hawaii (25 layoffs and 3,495 workers), Illinois (21 layoffs and 11,320 workers), Nevada (42 layoffs and 14,943 workers), New York (47 layoffs and 10,765 workers), and Texas (21 layoffs and 8,839 workers).
Most extended mass layoffs due to the terrorist attacks were concentrated in two industry groups: (1) accommodation and foods services and (2) transportation and warehousing. Together they accounted for 268 (or 62%) of the large, long-lasting terrorist-related layoffs and 92,224 (or 73%) of the employees displaced by those events. In particular, 100 (or 23%) of the layoffs took place at hotels and motels, excluding casino hotels, within the broader accommodation and food services industry group. Non-casino hotels/motels let go 18,703 employees in the actions, or 15% of all separated workers. Another 37 layoffs (or 9% of the total) were at casino hotels, and 14,100 workers (or 11% of all separated workers) were let go in the actions. The 30 remaining layoffs in the accommodation and food services industry group (or 7% of all layoffs) that led to the termination of 7,544 workers (or 6% of all separated employees) involved such firms as restaurants, cafeterias, fast-food establishments, and caterers that felt the effect of reduced tourism brought about by travelers’ fears over the events of September 11, 2001. Thus, the accommodation and food services industry group as a whole experienced 39% of all large, long-lasting layoffs (167 events) directly or indirectly connected with the terrorist actions and released 32% (40,347) of all separated workers. In comparison, the scheduled air transportation industry called many fewer actions (69 or 16% of the terrorist-related layoffs), but it terminated a somewhat larger number of employees (44,861 or 36% of the total). The other 32 extended mass layoffs in the transportation and warehousing industry group (or 7% of the total) likely involved nonscheduled air carriers and sightseeing or charter bus operators. An additional 7,016 workers were displaced by these employers (or 6% of all separated workers). The entire transportation and warehousing industry group thus accounted for 101 (or 23%) of the terrorist-related layoffs and 51,877 (or 41%) of all separated workers.
