Americans' Aging Autos

Abstract

[Excerpt] From 2008 to 2012, the average age of U.S. households' vehicles increased as owners held on to their cars, trucks, and vans longer. The trend in aging autos coincides with declines in average household income in 2008; however, subsequent recovery in households' incomes and a return to previous levels of expenditures on vehicles in 2012 do not appear to have reversed the pattern of aging. (See chart 1.) Analysis of data from the Bureau of Labor Statistics Consumer Expenditure Survey suggests that households continued to own the same number of vehicles over the last 10 years, but are owning their vehicles longer.

Americans' aging autos

By Ryan Pfirrmann-Powell

From 2008 to 2012, the average age of U.S. households' vehicles increased as owners held on to their cars, trucks, and vans longer. The trend in aging autos coincides with declines in average household income in 2008; however, subsequent recovery in households' incomes and a return to previous levels of expenditures on vehicles in 2012 do not appear to have reversed the pattern of aging. (See chart 1.) Analysis of data from the Bureau of Labor Statistics Consumer Expenditure Survey suggests that households continued to own the same number of vehicles over the last 10 years, but are owning their vehicles longer.

Chart 1

The average age of households' cars, vans, sport utility vehicles (SUVs), and trucks increased from 10.1 years in 2007 to just over 11.3 years in 2012. Chart 2 shows that the share of newer vehicles (those manufactured less than 5 years earlier than the year shown) dropped by nearly 33 percent from 2007 to 2012 while the share of vehicles 11–20 years old grew by 25 percent over the same timeframe.

Chart 2

The average age of cars, vans, SUVs, and trucks reported in the survey all increased at similar rates from 2001 to 2012, even as the share of trucks and vans increased from 36.2 percent to 47.3 percent.

For households that reported disposing of a vehicle during 2012, the average age of the vehicles sold was 15 years, the average vehicle donated or given away was 14 years old, and the average vehicle traded in (toward the value of a new car) was 9 years old. Roughly one-third of all vehicles in the survey were paid for in part with the trade-in of a vehicle. For owned vehicles paid for with a trade-in credit, the credit accounted for 32 percent of the net purchase price of the new vehicle.

Higher income households tended to own more vehicles (2.4 vehicles for the highest income quintile, compared with 1.4 vehicles for the lowest quintile). For all income groups, the ratio of vehicles to household members age 16 and older remained constant at just over 1:1 from 2001 to 2012. Household members living in single-family detached dwellings owned the most vehicles (2.1), while occupants of high-rise apartments or dormitories owned the fewest (1.1). Rates of vehicle ownership remained constant for households, with the exception of multifamily residences, such as duplexes and garden-style and high-rise apartments, for which the number of vehicles per household declined 6 percent since 2001.

The cost of owning vehicles longer

The average annual maintenance cost per vehicle climbed from \$514 in 2011 to \$537¹ in 2012, not including average car insurance expenditures of \$593 per vehicle and auto repair service policies averaging \$7 per vehicle. It is worth noting that insurance and repair service policy expenditures are highest for households with newer cars, and higher expenditures on these items are likely associated with lower out-of-pocket expenditures for other vehicle repairs reported in the survey.

In 2012, households owning vehicles less than 5 years old—not surprisingly—reported the lowest maintenance and repair costs per vehicle. Households with vehicles averaging 6–15 years of age paid \$151 more per vehicle per year, on average, for maintenance and repair than did households with newer vehicles. Interestingly, average maintenance and repair expenditures per vehicle dropped 16 percent as the average age of the vehicle increased to 16–20 years and then dropped by another 5 percent as the vehicle’s age went beyond 20 years, before rising slightly as the age of the vehicle reached 26 years or older.

Table 1 shows that declining expenditures on routine maintenance, such as oil changes, tire repair or replacement, body work, brakework, front-end alignment, and vehicle cleaning, are associated with older vehicles. Motor tuneups, electrical system repairs, exhaust system repairs, engine cooling system repairs, and related fluid costs peak for vehicles in the 11- to 15-year age range and remain higher for vehicles older than 15 years. Of all expenditures, those for vehicle parts, equipment, and accessories increase most as vehicles age. Also, higher expenditures for motor repair and replacement are observed in vehicles 26 years and older. The higher expenditures associated with vehicles in that age range appear to be heavily influenced by owners of classic cars.

Table 1

Average expenditure and frequency reported for various types of maintenance and repair, by average age of vehicle(s), 2012

Selected maintenance and repair expenses	All		Average age of household vehicle(s)					
			New–5 years		6–10 years		11–15 years	
	Expenditure Level	Frequency (in percent)	Expenditure Level	Frequency (in percent)	Expenditure Level	Frequency (in percent)	Expenditure Level	Frequency (in percent)
Average annual maintenance/repair expenditure	\$546	...	\$437	...	\$588	...	\$576	...
Tires—purchased, replaced, installed/repair tires and other repair work	\$132.46	16	\$127.73	11	\$164.24	17	\$124.88	16

	16–20 years		21–25 years		26 or more years	
	Expenditure Level	Frequency (in percent)	Expenditure Level	Frequency (in percent)	Expenditure Level	Frequency (in percent)
Miscellaneous auto repair, servicing/gas tank repair, replacement (from Diary Survey)	—	—	—	—	—	—

Note: 23,026 consumer units with one or more vehicles = 100 percent. Dashes indicate expenditures measured only in the Consumer Expenditure Diary Survey. The age of vehicles is not observed in the Diary data, so the average expenditure is assumed to be uniformly distributed across the average vehicle age. Zero indicates less than 0.5 percent.

Source: Bureau of Labor Statistics.

Households headed by individuals under the age of 25 and individuals over the age of 65 had the highest average vehicle age (just over 11 years old) and reported spending similar amounts on vehicle maintenance and repair (\$480 per vehicle, by those under age 25 and \$499 per vehicle, by those over age 65). Households headed by individuals 55–64 years old reported spending the most of all households on vehicle maintenance and repair (\$607 per vehicle) and had an average vehicle age of just under 11 years old.

Although vehicle maintenance and repair expenditures as a percentage of income before taxes increased slightly, from 1.4 percent in 2007 to 1.6 percent in 2012, household members looking to reduce expenses found that the cost of maintaining an aging vehicle pales in comparison to the cost of purchasing a newer vehicle. Among households that purchased vehicles in 2012, the net purchase price after discount, trade-in, or rebate equaled 34 percent of the family’s annual income before taxes for new vehicles and 16 percent for used vehicles. These percentages are down slightly from 37 percent for new vehicles in 2004 and little changed for used vehicles that same year. Note, however, that the percentage for used vehicles peaked at 20 percent in 2008, driven largely by lower middle income households spending 34 percent of their average income before taxes for the purchase of used vehicles.

Consumer Expenditure Survey data suggest that, constrained by declining incomes starting at the end of 2008, many households delayed purchasing a new vehicle or purchased an older vehicle to reduce expenses. Given that income, expenditures in general, and expenditures on vehicles returned to prerecession levels in 2012, it remains to be seen if households will return to their old habits of buying newer vehicles, reversing the trend toward keeping cars longer described in this article.

NOTES

ⁱ This estimate includes \$59.99 for miscellaneous auto repair and servicing and \$1.34 for gas tank repair or replacement; data on both types of maintenance are collected exclusively in the Consumer Expenditure Diary Survey. These

expenditures are uniformly distributed in the analysis of average maintenance and repairs by average vehicle age because data on the age of vehicles are collected only in the Interview Survey.
