Extended Mass Layoffs in 2003

Abstract

[Excerpt] The Bureau of Labor Statistics (BLS) conducts the Mass Layoff Statistics (MLS) program to provide information on large-scale layoff events and on the characteristics of dislocated workers. Each month, BLS reports on the number of mass layoff actions by employers, and each quarter there is a more detailed report on the number and characteristics of those mass layoffs that last more than 30 days. (Since 2004, the detailed reports no longer cover government and nonfarm layoffs.) This report summarizes this latter analysis for 2003, providing information on the industry, geographic distribution, and size of mass layoffs; the demographic characteristics of those claiming unemployment insurance; the duration of certified unemployment; the expectation of recall; and the extent of permanent worksite closures.

Keywords

mass layoffs, unemployment, dislocated workers, unemployment insurance, geographic distribution, worksite closures

Extended Mass Layoffs in 2003

U.S. Department of Labor
Bureau of Labor Statistics
December 2004

Report 982

Introduction

The Bureau of Labor Statistics (BLS) conducts the Mass Layoff Statistics (MLS) program to provide information on large-scale layoff events and on the characteristics of dislocated workers. Each month, BLS reports on the number of mass layoff actions by employers, and each quarter there is a more detailed report on the number and characteristics of those mass layoffs that last more than 30 days. (Since 2004, the detailed reports no longer cover government and nonfarm layoffs.) This report summarizes this latter analysis for 2003, providing information on the industry, geographic distribution, and size of mass layoffs; the demographic characteristics of those claiming unemployment insurance; the duration of certified unemployment; the expectation of recall; and the extent of permanent worksite closures.

In 2003, employers laid off approximately 1.5 million workers in 7,346 extended mass layoff actions. Compared with 2002, layoff activity remained about the same, though the number of separations (layoffs) was down in the second half of 2003. (See table 1.) Layoff activity involving permanent worksite closures, which accounted for 13 percent of all layoff events and affected 214,110 workers in 2003, continued to decline from its peak in 2001.

Extended mass layoffs, as defined by BLS, refer to layoffs of at least 31 days' duration that involve the filing of initial claims for unemployment insurance by 50 or more individuals from a single establishment during a consecutive 5-week period. This report uses the North American Industry Classification System (NAICS) for the assignment and tabulation of layoff data by industry. Additional information about the program is provided in the Technical Note that follows the tables.

Highlights

Industry distribution of 2003 extended mass layoffs

- Manufacturing establishments accounted for 31 percent of layoff events and 28 percent of separations in the private sector in 2003, down from 34 percent of events and 31

percent of separations in 2002. These were the lowest percentages recorded for this sector since annual data became available in 1996. Food manufacturing firms (mostly fruit and vegetable canning and freezing) accounted for the largest number of workers laid off in manufacturing, followed by transportation equipment (mostly in automobile and aircraft) and computer and electronic products manufacturing (mostly in semiconductors). These three sectors accounted for 47 percent of the separations in manufacturing in 2003. Computer and electronic products and apparel registered the largest decreases in manufacturing separations (-39,040 and -10,833, respectively) when compared with 2002. (See tables 2 and 3.)

- Agriculture accounted for more than 10 percent of private sector layoff events and more than 12 percent of separations, with most of these events and separations due to the completion of seasonal work. (See table 2.) Layoff events and separations were most prevalent in agriculture and forestry support activities, followed by crop production.

- Administrative and waste services accounted for 10 percent of private sector layoff events and 11 percent of separations, due in part to the completion of contracts in temporary help agencies and professional employer organizations. (See table 2.) The number of events reached a program high of 665 events, while the number of separations (147,920) recorded its second highest level.

- Construction (mainly in heavy civil engineering and specialty trade contractors) accounted for 14 percent of events and 10 percent of separations in the private sector. (See table 2.) The number of events was the highest level recorded in the industry, while separations registered its highest level since 1997. Layoffs due to the completion of seasonal work and the completion of contracts accounted for 83 percent of the separated workers in construction.

- Retail trade (mainly general merchandise and food and beverage stores) accounted for 9 percent of private-sector separations. (See table 2.) The end of seasonal work and

bankruptcy were the reasons for layoff cited most often by these employers.

- The number of laid-off workers in four major sectors (educational services, finance and insurance, information, and wholesale trade) reached record highs. There were no sectors reporting record lows. Layoffs in government also reached a program high in 2003, largely due to State and local government seasonal layoffs in educational services.

- Manufacturers and distributors of clothing reported laying off 96,457 workers, the lowest level since 2000. (See table 2.) In the last 3 years, more than 320,000 workers have lost jobs due to mass layoffs in this industry group. Since 2000, forty-four percent of separations in this group have occurred in the South.

- Employers involved in food production, processing, and distribution accounted for 24 percent of all private-sector separations, or 331,613 workers. The number of workers laid off increased by 4 percent, or +12,650 workers, compared with 2002, and were at a record high. (See tables 2 and 3.)

- Of the major sectors, mining and professional technical service companies had the largest percentage decreases in separations resulting from layoffs, followed by those in management of companies and enterprises. Layoffs in educational services reported the largest percentage increase of laid-off workers in the private sector, followed by wholesale trade and real estate and rental and leasing. Layoffs in government establishments rose 29 percent over the year, due to increased layoff activity among State and local governments. (See table 3.)

- Each of the four information technology-producing industries (computer hardware, software and computer services, communications equipment, and communications services) registered large declines in separations from year-ago levels. Among these industries, computer hardware firms had the largest number of laid-off workers (32,689) in 2003. (See table 4.)

- Of the 101 three-digit NAICS-coded industry groups identified in the MLS program, 51 posted decreases in the number of separated workers during 2003. Computer and electronic products manufacturing had the largest decrease (-39,040 workers), followed by general merchandise stores (-23,334) and professional and technical services (-17,655). Forty-three industries registered increases, led by educational services (+18,712), motion picture and sound recording establishments (+15,582), and air transportation (+14,529).

- Among three-digit NAICS industries, specialty trade contractors moved into the top 10 in terms of worker separations. This industry replaced professional and technical ser-

vices. Heavy and civil engineering construction and educational services industries moved into the top 5, replacing computer and electronic products manufacturing and general merchandise stores. (See table 5.)

- Among six-digit NAICS industries, scheduled passenger air transportation and supermarkets and other grocery stores moved into the top 10 in terms of separations. Leaving the list were other postharvest crop activities and wired telecommunications carriers. (See table 6.)

Reason for layoff

- Employers citing the end of seasonal work as the reason for layoff accounted for 32 percent of layoff events and 36 percent of separations, the same as in 2002. (See table 7.) On average, during each of the last 4 years, more than 525,000 have been laid off due to seasonal work. Twenty-eight percent of all workers separated because seasonal work ended occurred in food production (agriculture and food processing) establishments located in California.

- Layoffs due to internal company restructuring accounted for 20 percent of all extended mass layoff events and 21 percent of all separations, down from 23 percent of events and 25 percent of separations in 2002. (See table 7.) These layoffs occurred largely in general merchandise stores, air transportation, and computer and electronic products manufacturing. Employers in California reported the largest number of such laid-off workers, followed by Illinois.

- In 2003, the number of workers separated due to the completion of a contract (151,647) was the highest since 1997. (See table 7.) The largest number of separations due to contract completion occurred in administrative and support services (temporary help), followed by specialty trade contractors, building construction, and heavy and civil engineering construction firms. Layoffs due to the cancellation of a contract reached a program high of 35,601 in 2003.

- Layoffs due to a nonseasonal lack of demand for products and services (slack work) declined sharply in 2003 (-75,189 workers). This was the second consecutive year that the number of separations due to slack work has declined by 35 percent. The decline in 2003 was due largely to fewer layoffs in computer and electronic products, in transportation equipment manufacturing, and in electronic equipment manufacturing. The end of seasonal work (-26,241) and reorganization within the company (-23,208) had the next largest declines in layoffs by reason. Layoffs due to labor disputes had the largest increase in worker separations, +13,490, followed by those due to the completion of contracts and to import competition (+9,286 and +8,384, respectively). (See tables 7 and 8.)

- Florida and Illinois accounted for the highest number of separations in layoffs due to the completion of contracts.

Illinois and California posted the highest separation counts in layoffs as a result of company reorganizations. California accounted for the largest number of laid-off workers due to seasonal work, slack work, and financial difficulty. (See table 9.)

Size of layoff

- Layoff events in 2003 continued to be concentrated at the lower end of the layoff-size spectrum, with 59 percent involving fewer than 150 workers. This figure has remained fairly consistent, ranging from 58 to 60 percent annually. These layoff events, however, accounted for only 26 percent of separations, up slightly from 24 percent last year. Layoff events involving 500 or more workers accounted for 34 percent of separations. (See table 10.) These larger size layoffs accounted for 34 to 36 percent of total separations in all years except 1997, when they made up 32 percent of the total.

- The average number of separations per layoff event in 2003 was 205, the lowest level since 1999. Among private sector establishments, retail trade (largely food and beverage and general merchandise stores) reported the largest average layoff size, 308, followed by arts, entertainment, and recreation, with 275 separations per event. Establishments with the smallest average layoff size were those in other private sector services (132 workers), in utilities (135 workers), and in health care and social assistance (137 workers). (See table 11.)

- When the reason given for the layoff event was secondary effects of labor disputes, an average of 887 workers were impacted per event, the highest annual average for any reason. This was followed by layoffs that were reported as due to a model changeover (368 workers per event) and bankruptcy (339 workers). Layoffs due to a shortage of materials and plant or machine repair averaged the fewest separations per layoff event (121 and 138 workers, respectively). (See table 11.)

- Employers reporting the worksite as permanently closed averaged 230 separations per layoff event, the lowest average since 1998. (See table 11.)

Initial claimants

- There were 1,403,349 initial claimants for unemployment insurance associated with extended mass layoff events in 2003. Of these, 44 percent were women, 14 percent were black, 20 percent were Hispanic, and 16 percent were 55 years of age or older. Thirty-nine percent of claimants were between the ages of 30 and 44. (See tables 12 and 14.) In 2003, of the total civilian labor force, 47 percent were women, 11 percent were black, 13 percent were Hispanic, and 15 percent were 55 years of age or older. Thirty-seven percent of the civilian labor force was between the ages of 30 and 44.

- Persons of Hispanic origin accounted for 20 percent the claimants involved in extended mass layoff events, about the same as last year (19 percent). The percentage of Hispanic claimants was highest in agriculture (89 percent), followed by health care and social assistance (27 percent) and by administrative and waste services (23 percent). With respect to the reason for layoff, high percentages of Hispanic claimants were reported in layoffs due to the ending of seasonal work, the secondary effects of a labor dispute, and the start of a vacation period. (See table 13.)

- Black claimants accounted for 14 percent of all laid-off workers, about the same as last year (15 percent). Establishments providing educational services reported the highest percentage (32 percent) of black claimants, followed by other services, except public administration (24 percent) and by healthcare and social assistance (23 percent). High percentages of black claimants were reported in layoffs due to automation, import competition, and contract cancellation. (See table 13.)

- Sixteen percent of all claimants were aged 55 and over in 2003, about unchanged from 2002. The representation of these older claimants was highest in professional and technical services and in arts, entertainment, and recreation. Claimants between the ages of 30 and 44 accounted for 39 percent of all claimants from extended mass layoffs. The proportion of these claimants in this age group was highest among agriculture, construction, and information establishments. (See table 14.)

Duration of insured unemployment

- Tennessee had the longest duration of insured unemployment associated with extended mass layoff events (as measured by the average number of continued claims for unemployment insurance following the initial claim), followed by North Carolina, the District of Columbia, New Mexico, and Colorado. Claimants experiencing the shortest jobless duration (as measured by the average number of continued claims) were separated from employers located in Kentucky, followed by Nebraska, Alaska, and Hawaii. (See table 15.)

- Tennessee reported the largest proportion of claimants exhausting unemployment insurance benefits (40 percent), followed by Delaware (36 percent) and Wyoming (36 percent). States registering the lowest percentages of exhaustees were Nebraska (less than 1 percent), Mississippi (1 percent), and Alaska (2 percent). (See table 15.)

- The longest average jobless duration (based on the average number of continued claims) was experienced by claimants laid off from finance and insurance, followed by wholesale trade and utilities. Claimants laid off from accommodation and food services had the shortest spells of jobless duration, followed by retail trade and construction. (See table 16.)

- Benefit exhaustion rates were highest among workers in finance and insurance and in professional and technical services, while workers laid off in accommodation and food services and in construction had the lowest rates. (See table 16.)

- Claimants laid off due to energy-related issues, the relocation of work outside the United States, and automation had the longest jobless duration. The shortest duration occurred in layoffs due to labor disputes and natural disasters. (See table 16.)

- Benefit exhaustion rates were highest for claimants involved in worksite closures. Claimants in layoffs where employers did not expect a recall had higher benefit exhaustion rates compared with events in which a recall was expected. (See table 16.)

- Among the 50 largest metropolitan statistical areas in terms of the level of initial claims in extended mass layoff events, claimants laid off from establishments in St. Louis, MO led the list of those with the longest jobless duration, followed by San Jose, CA, Middlesex-Somerset-Hunterdon, NJ, Indianapolis, IN, and San Francisco, CA. Claimants in Erie, PA, Wichita, KS, and Harrisburg-Lebanon-Carlisle, PA had the shortest duration of unemployment. Benefit exhaustion rates were highest in Yuma, AZ and West Palm Beach-Boca Raton, FL. (See table 17.)

- Black and Asian or Pacific Islander claimants had higher benefit exhaustion rates than other race and ethnic groups, while white claimants had the lowest. By age, the older a claimant, the more likely he or she was to exhaust benefits. Women had higher exhaustion rates than men did. (See table 18.)

Geographic distribution

- In 2003, for the seventh time in the last 8 years, employers in the West reported the highest number of separations; these occurred primarily among establishments engaged in food production (agriculture and food manufacturing). (See table 19.) The Northeast continued to have the lowest numbers of events and separations. Excluding the impact of seasonal layoffs, the West (331,174) and South (242,843) had the highest levels of separated workers in extended mass layoff events.

- In 2003, decreases in the number of separations occurred in two of the four regions, with the South reporting the largest decrease (-38,741), mostly due to fewer layoffs in apparel manufacturing, food and beverage stores, and computer and electronic products manufacturing. Six of the nine geographic divisions reported a decrease in separations from 2002, led by the Mountain (-54,356), West South Central (-27,929), and East South Central (-21,702) divisions. (See table 19.)

- California had the largest number of worker separations, 436,405, mostly from food production and administrative and support services. Even when the substantial impact of seasonal layoffs is excluded, California still had the highest separations' total for 2003 (259,716 workers). The States with the next-highest totals of separations including seasonal layoffs were Illinois (133,517), Florida (112,216), and New York (93,910). (See table 20.)

- Alabama, Nevada, Ohio, and Texas reached their lowest annual totals of laid-off workers since the MLS program resumed in 1995, while California, Florida, Montana, New York, and South Dakota reached new highs. Thirty-three States and the District of Columbia had over-the-year declines in the number of laid-off workers, led by Arizona (-25,762), Texas (-24,941), Illinois (-21,191), and Pennsylvania (-20,389). Of the 17 States reporting an over-the-year increase, California (+78,858), Michigan (+27,144), and Wisconsin (+15,642) experienced the sharpest increases. (See table 20.)

- Fifty-six percent of events and 52 percent of separations occurred in metropolitan areas, a decrease from 2002, when 66 percent of events and 61 percent of separations occurred in such areas. Among the 331 Metropolitan Statistical Areas, Chicago reported the highest number of separations (62,945), mainly from administrative and support services and specialty trade contractors. Boston, Detroit, and Minneapolis-St. Paul entered the top ten metropolitan areas in terms of laid-off workers, replacing San Jose, Yuma, and Phoenix-Mesa. (See table 21.)

- California had the highest concentration of layoffs relative to employment among the States, in part due to the impact of food production. (See chart 1.) Relative concentrations of mass layoff activity also were high in Washington, Illinois, Alaska, Montana, Wisconsin, and Idaho. The lowest concentrations of mass layoff activity were found in Delaware, the District of Columbia, Maryland, and South Dakota. Even excluding the substantial impact of seasonal work, California still had the highest relative concentration index, followed by Illinois and Florida. (See Chart 2.)

Recall expectations

- In 2003, employers expected a recall in 47 percent of mass layoff actions, the same as in 2002. In the 1996-2000 period, recall expectations ranged from 60-66 percent, compared to 45-47 percent in the 2001-2003 period. Industries where the expectation of recall was highest following a layoff included agriculture (81 percent), construction (72 percent), arts, entertainment, and recreation (69 percent), and mining (69 percent). Layoffs in the finance and insurance sector had the lowest percentage of recall expectation (3 percent), followed by those in the information sector (10 percent) and real estate and rental and leasing (14 percent).

Excluding seasonal and vacation-period layoffs (in which a recall was expected 94 percent of the time), a recall was expected in only 23 percent of events—the MLS program’s lowest annual recorded percentage. (See tables 22 and 23.)

- Of those establishments expecting a recall, 40 percent indicated that all workers would eventually be recalled, and 87 percent expected to recall at least half of the workers. (See table 22.)

- Employers citing automation, energy concerns, and non-natural disaster as the reason for the layoff had the lowest percentages of recall expectation. Layoffs due to a vacation period, inclement weather, plant or machine repair, and the end of seasonal work registered the highest recall expectations. (See table 23.)

- Manufacturing industries accounted for 37 percent of all events and 35 percent of the separations for which the employer did not expect a recall. These layoffs without expectation of recall occurred mainly in computer and electronic products (primarily in semiconductors and related devices, telephone apparatus, and bare printed circuit boards), transportation equipment (primarily in aircraft and automobiles), and primary metals. (See table 24.)

- Internal company restructuring was the reason cited most frequently for layoffs from which no recall is expected, accounting for 46 percent of the layoff events and 52 percent of separations. Layoffs due to contract completion accounted for an additional 16 percent of layoff events and 13 percent of separations. (See table 24.)

Permanent worksite closures

- Employers reported that 13 percent of all extended mass layoff events resulted in a permanent closure of the worksite, affecting 214,110 workers. The number of workers involved in closures has declined by -165,666, or -44 percent, since reaching a peak in 2001. (See table 25.)

- Separations in permanent closures in 2003 were due mainly to internal company restructuring. Compared with 2002, employers citing import competition had the largest increase (+7,058) in laid-off workers. (See table 25.)

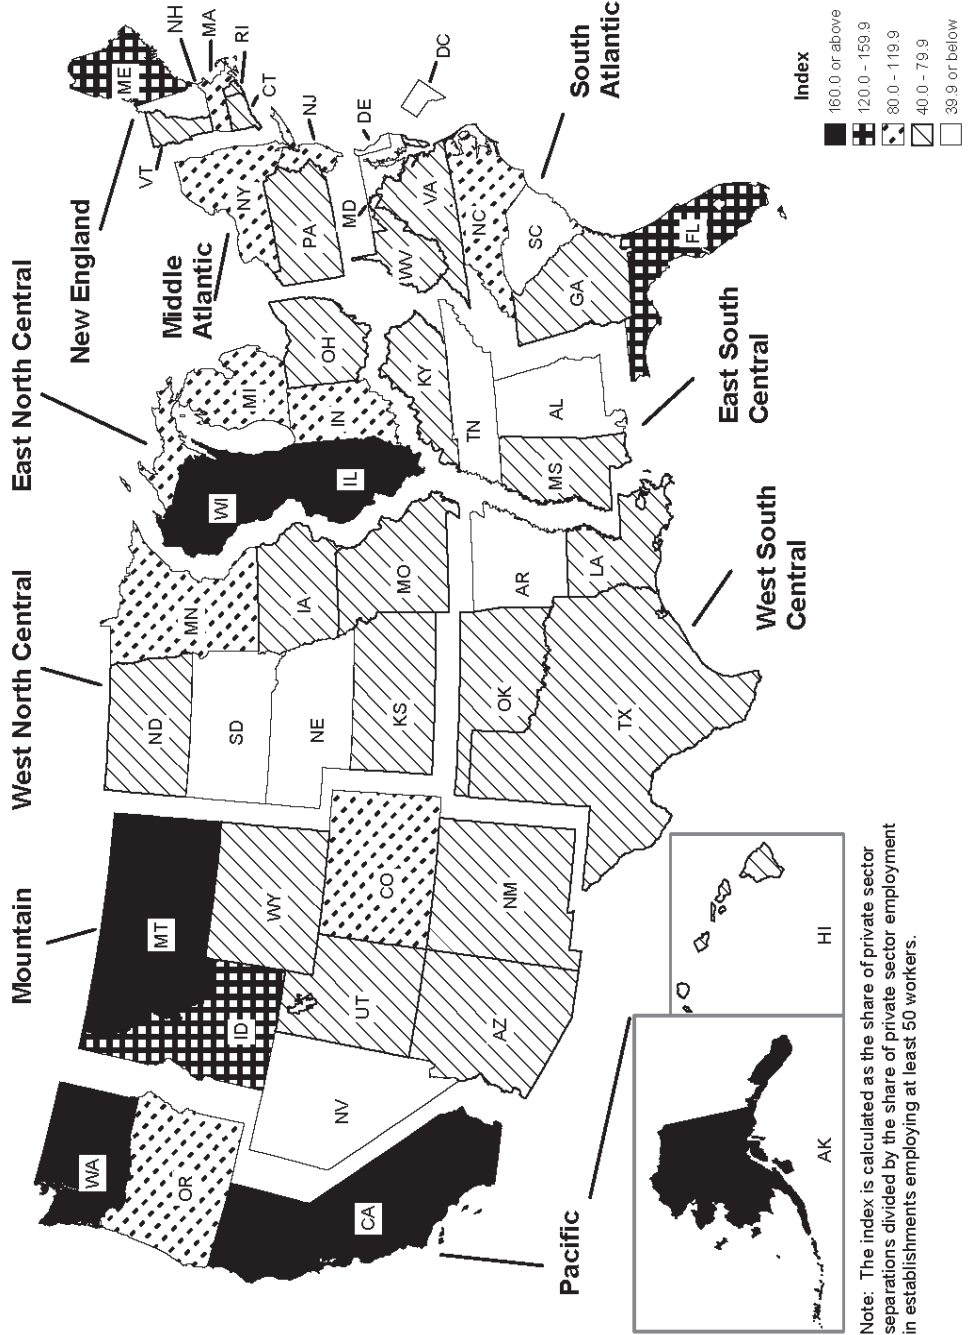

- In 2003, manufacturing accounted for 50 percent of events and 44 percent of separations resulting in worksite closure. These events occurred mostly in computer and electronic products, machinery, textile mills, and apparel. Retail trade accounted for 13 percent of the layoff events and 21 percent of separations resulting from closures during the year, largely in general merchandise stores and in food and beverage stores. (See table 26.)

- In 2003, textile mills and primary metal manufacturing establishments moved into the top 10 three-digit NAICS industries in terms of the number of laid-off workers in permanent closures. The manufacturing industries replaced telecommunications and truck transportation. (See table 27.)

- California registered the highest number of separations in permanent closure-related events (41,975), followed by North Carolina (18,399), Florida (15,201), and Illinois (12,925). Texas (-21,629) and Pennsylvania (-11,027) reported the largest decreases in separations due to closures from 2002 to 2003; North Carolina (+3,568) and Georgia (+3,100) had the largest increases in laid-off workers. (See table 28.)

- Among the 331 Metropolitan Areas, Los Angeles-Long Beach reported the highest number of separations (10,856) in permanent closure-related events, followed by Chicago (5,518) and Atlanta (4,084). Atlanta, Middlesex-Somerset-Hunterdon, Orange County, Oakland, Stockton-Lodi, Tampa-St. Petersburg-Clearwater, and Denver entered the top 10 metropolitan areas this year in terms of workers laid off in permanent closures, replacing Salt Lake City-Ogden, Kansas City, Detroit, Boston, San Francisco, Dallas, and Bergen-Passaic. (See table 29.)

Chart 1. Index of mass-layoff separations, 2003

Note: The index is calculated as the share of private sector separations divided by the share of private sector employment in establishments employing at least 50 workers.

**Chart 2. Index of mass-layoff separations
(excluding seasonal work and vacation period), 2003**

¹ Information technology-producing industries are defined in *Digital Economy 2003*, Economics and Statistics Administration, U.S. Department of Commerce.

² The industries included in this grouping, based on the 2002 North American Industry Classification System (NAICS), are: semiconductor machinery manufacturing; office machinery manufacturing; electronic computer manufacturing; computer storage device manufacturing; computer terminal manufacturing; other computer peripheral equipment manufacturing; electron tube manufacturing; bare printed circuit board manufacturing; semiconductors and related device manufacturing; electronic capacitor manufacturing; electronic resistor manufacturing; electronic coils, transformers, and inductors; electronic connector manufacturing; printed circuit assembly manufacturing; other electronic component manufacturing; industrial process variable instruments; electricity and signal testing instruments; analytical laboratory instrument manufacturing; computer and software merchant wholesalers; and computer and software stores.

³ The industries included in this grouping, based on the 2002 North American Industry Classification System (NAICS), are: software publishers; Internet service providers;

Web search portals; data processing and related services; computer and software merchant wholesalers; computer and software stores; custom computer programming services; computer systems design services; computer facilities management services; other computer related services; office equipment rental and leasing; and computer and office machine repair.

⁴ The industries included in this grouping, based on the 2002 North American Industry Classification System (NAICS), are: telephone apparatus manufacturing; audio and video equipment manufacturing; broadcast and wireless communications equipment; fiber optic cable manufacturing; software reproducing; and magnetic and optical recording media manufacturing.

⁵ The industries included in this grouping, based on the 2002 North American Industry Classification System (NAICS), are: wired telecommunications carriers; cellular and other wireless carriers; telecommunications resellers; cable and other program distribution; satellite telecommunications; other telecommunications; and communication equipment repair.

Table 5. Industry distribution: Extended mass layoff events and separations, top 50 three-digit NAICS industries in 2003

¹ The Mass Layoff Statistics (MLS) program tracks continued claim activity for initial claimants associated with extended mass layoffs once a month during the Current Population Survey (CPS) reference week, which is usually the week including the 12th day of the month. Continued claims with earnings are excluded because such individuals are classified as employed in the CPS.

Final payment information for MLS claimants is collected weekly. (See the Technical Note for additional information.)

² See footnote 1, table 1.

¹ Metropolitan Statistical Areas are ranked by the number of separations in 2003.

² See footnote 1, table 1.

³ Data do not meet Bureau of Labor Statistics or State agency disclosure standards.

NOTE: The geographic boundaries of the Metropolitan Statistical Areas shown in this table are defined in *Metropolitan Statistical Areas, 1999*, U.S. Office of Management and Budget, June 1999.

Technical Note

The Mass Layoff Statistics (MLS) program is a Federal-State program that uses a standardized, automated approach to identifying, describing, and tracking the effects of major job cutbacks, using data from each State's unemployment insurance (UI) database. Establishments that have at least 50 initial claims for unemployment insurance filed against them during a consecutive 5-week period are contacted by the State agency in charge of the UI program to determine whether these separations are of at least 31 days duration, and, if so, information is obtained on the total number of persons separated and the reasons for these separations. Establishments are identified according to industry classification and location, and unemployment insurance claimants are identified by such demographic factors as age, race, gender, ethnic group, and place of residence. The MLS program yields information on an individual's entire spell of unemployment, to the point at which regular unemployment insurance benefits are exhausted.

The MLS program resumed in April 1995; it had been terminated in November 1992 due to lack of funding. However, due to changes in concepts and definitions, data from the resumed program are not comparable to earlier data.

In addition, the MLS program discontinued the collection of dislocated worker information during 2003 because of budget constraints.

Definitions

Clothing manufacturing and distribution. Industries involved in the production and distribution of clothing. These industries include cotton farming; cotton ginning; textile mills; apparel manufacturing; footwear manufacturing; apparel and piece goods merchant wholesalers; clothing stores; shoe stores; department stores; and formal wear and costume rental.

Communications equipment. The industries included in this grouping, which are from the *Digital Economy, 2003*, Economics and Statistics Administration, U.S. Department of Commerce, are: telephone apparatus manufacturing; audio and video equipment manufacturing; broadcast and wireless communications equipment; fiber optic cable manufacturing; software reproducing; and magnetic and optical recording media manufacturing.

Communications services. The industries included in this grouping, which are from the *Digital Economy, 2003*, Economics and Statistics Administration, U.S. Department of Commerce, are: wired telecommunications carriers; cellular

and other wireless carriers; telecommunications resellers; cable and other program distribution; satellite telecommunications; other telecommunications; and communication equipment repair.

Continued claim. A claim filed after the initial claim, by mail, telephone, or in person, for waiting period credit or payment for a certified week of unemployment. The MLS program collects continued claims for one week each month. That is generally the calendar week that includes the 12th day of the month and is referred to as the Current Population Survey (CPS) reference week. Because continued claims are not tracked for all weeks, an exact measure of insured jobless duration is not available.

Computer hardware. The industries included in this grouping, which are from the *Digital Economy, 2003*, Economics and Statistics Administration, U.S. Department of Commerce, are: semiconductor machinery manufacturing; office machinery manufacturing; electronic computer manufacturing; computer storage device manufacturing; computer terminal manufacturing; other computer peripheral equipment manufacturing; electron tube manufacturing; bare printed circuit board manufacturing; semiconductors and related device manufacturing; electronic capacitor manufacturing; electronic resistor manufacturing; electronic coils, transformers, and inductors; electronic connector manufacturing; printed circuit assembly manufacturing; other electronic component manufacturing; industrial process variable instruments; electricity and signal testing instruments; analytical laboratory instrument manufacturing; computer and software merchant wholesalers; and computer and software stores.

Establishment. A unit at a single physical location at which predominantly one type of economic activity is conducted.

Extended layoff event. Fifty or more initial claims for unemployment insurance benefits from an establishment during a 5-week period, with at least 50 workers separated for more than 30 days.

Final payment recipients. Persons who have exhausted all of their unemployment insurance benefits and are no longer eligible for any further benefits.

Food production, processing, and distribution. Industries that are involved in the production and distribution of food. These industries include oilseed and grain farming; vegetable

and melon farming; fruit and tree nut farming; food crops grown under cover; sugarcane farming; hay farming; all other crop farming; cattle ranching and farming; hog and pig farming; poultry and egg production; sheep and goat farming; animal aquaculture; apiculture; all other animal production; fishing, hunting and trapping; soil preparation, planting, and cultivating; crop harvesting, primarily by machine; other postharvest crop activities; farm labor contractors and crew leaders; farm management services; support activities for animal production; food manufacturing; beverage manufacturing; grocery and related product wholesalers; farm product raw material merchant wholesalers; alcoholic beverage merchant wholesalers; farm supplies merchant wholesalers; food and beverage stores; food (health) supplement stores; refrigerated warehousing and storage; farm product warehousing and storage; veterinary services; and food services and drinking places.

Initial claimant. A person who files any notice of unemployment to initiate a request either for a determination of entitlement to and eligibility for compensation, or for a subsequent period of unemployment within a benefit year or period of eligibility.

Layoff. The separation of persons from an employer as part of a mass layoff event. (See below.) Such layoffs involve both persons who are subject to recall and those who are terminated.

Mass layoff. Fifty or more initial claims for unemployment insurance benefits from an establishment beginning in a given month, regardless of duration.

Software and computer services. The industries included in this grouping, which are from the Digital Economy, 2003, Economics and Statistics Administration, U.S. Department of Commerce, are: software publishers; Internet service providers; web search portals; data processing and related services; computer and software merchant wholesalers; computer and software stores; custom computer programming services; computer systems design services; computer facilities management services; other computer related services; office equipment rental and leasing; and computer and office machine repair.

Worksite closure. The full closure of either multi-unit or single-unit establishments or the partial closure of a multi-unit establishment where entire worksites affected by layoffs are closed or planned to be closed.
